tea, 1 ti, 2 tē, n [Colloq] I. t To serve or give tea to

II. t To drink or take tea

tea, n 1 The leaves or leaf-buds of the tea-tree or tea-

plant (see def 3) prepared for use or market. The prin-

cipal constituents of tea are n volatile oil, thein, tannin,

albuminous compounds, gum, etc, and some soluble

mineral matter, containing potash and phosphoric acid

Teas are named from the countries from which they are

exported, as Ceylon tea, China tea, Formosa tea, India

tea, Japan tea, Java tea, etc. The different kinds and

qualities of teas sold in the markets arise, not from different

varieties of the plant, but from (1) differences in the age of

the leaf and the time of gathering, young leaves or leaf-buds

gathered in spring giving the best tea, (2) differences in

atmospheric influences during growth or time of harvesting,

sunny weather giving the best, (3) differences in soil, (4)

differing modes of manipulation before, during, and after

roasting, leaves gathered from the same trees at the same

time becoming green tea or black tea according to treat-

ment and (5) assortment and separation or mixture of

various sizes and qualities of the leaf, or processes of sifting

and winnowing

The manufacture of tea formerly included as many as

12 operations, but recent methods reduce the number to 5

withering, by light, heat, and air rolling, by hand or ma-

chine fermenting in baskets or balls, sunning, done (if at

all) by an hour's exposure to a hot sun and sifting, in or

over an oven or the like, to dry. The difference between

black tea and green tea is the result of manipulation, the

latter being withered by steaming, as in a perforated cylin-

der or roller, thus retaining the green color, while leaves

simply dried turn black. When not composed of the whole

leaf teas are often distinguished as ends, nibs, sonnins,

broken leaf, dust, etc. Other conditions are indicated by

native names as hyson (spring), pouchong (wrapped),

souchong (small kind), etc. (See list below) The impor-

tation of tea into the United States for the year ending

June 30, 1911, was 102,653,942 pounds, valued at \$17,613,-

569. Of this Japan furnished 52,998,199 pounds, China

25,148,048 pounds, and India 9,600,633 pounds

2. A beverage consisting of an infusion or decoction of

tea-leaves

Tea as a beverage. If properly made, is n pure, gentle

stimulant to the nervous and circulatory system. Normal

persons can indulge in it without harmful effects but its use

should be avoided by neurotics. Its principal ingredients

are thein (which quickens the pulse and stimulates mental

activity), tannin, an astringent nromatic oil, which gives it

bouquet, and residual extract, which gives body and color.

A five- to seven-minute infusion develops comparatively

little tannin. Longer infusions are to be avoided and the

second infusion should never be made from the same leaf,

also tea should never be hotted

Though old Pepsy did not get his first cup of tea till 1601, the

'Mercurius Politicus' of two years earlier has an advertisement

of that excellent and by all Physicians approved, China drink

called by the Chameens Tea, by other nations Tap also Tea is

sold at the Suttans Her Coffee-house, Sweeting's Rents, by the

Royal Exchange' [London]

A Teleological II. n [Rare] Teleology *tel'e-o-log'ic-al*, a Pertaining to or of the nature of teleology, relating to the fact or doctrine of design — teleological argument, see quotation

The Teleological Argument, or argument from design, may be said in general to proceed from the obviously planful nature or orderliness of particular existences and their relations, as man has an increasing extent of power to the conclusion that they all have their ground in One Mind

G. T. LADD *Philosophy of Religion* vol. II p. 54 [s. '03] — *tel'e-o-log'ic-al-y*, ad *tel'e-o-log'ic-al-y*, 1 tel'i-for tīl'el-oj'ik, 2 tel'e-for tēl'e-lōg'ic-y, n 1. *Philos* The fact or doctrine of final causes or design as applied to the existence and development of individual beings or to the universe at large, the theory which assigns a definite end or ends in explanation of the structure and behavior of things. Teleology treats of final causes, not as opposed to efficient causes, whether physical or psychical, but as affording a necessary supplementary ground of explanation. Its claims have been, and still are, asserted and contested in the fields of biology, theology, ethics, and aesthetics

The evolution which was at first supposed to have destroyed teleology is found to be more saturated with teleology than the view which it superseded. AUBREY MOORE in Charles Gore's *Lux Mundi, Christian Doctrine of God* p. 105 [s. 1889]

2. *Biol* (1) The doctrine of design, which assumes that the phenomena of organic life and development can be explained only by conscious or purposive causes, and not by mechanical causes

Teleology implies that the organs of every organism are perfect and cannot be improved. The Darwinian theory simply affirms that they work well enough to enable the organism to hold its own against such competitors as it has met with, but admits the possibility of indefinite improvement. HUXLEY *Lay Sermons, Criticisms on Origin of Species* p. 332 [March 1870]

*tel'e-phone*, n An instrument or set of instruments *tel'e-fones*, n For reproducing sound at a distant point by

the transmission of impulses over a conducting wire or cord, especially by the agency of electricity [*TELE* + *Gr phōnē*, sound]

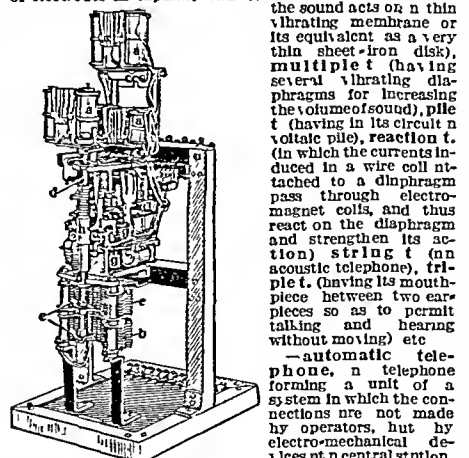

The simplest form of telephone consists of a cord drawn taut between two drumheads, sometimes called acoustic or mechanical telephone. The ordinary electrical telephone apparatus consists of (1) a transmitter, in which a diaphragm, vibrated by a sound, causes rapid alterations in the strength of an electric current, (2) a wire for conducting this current to a distant point, and (3) a receiver, in which a diaphragm is caused to vibrate by the current, reproducing the sound in the first electric telephone to come into general use, patented by Alexander Graham Bell and known as the magnetic telephone, or magneto-telephone, an iron diaphragm

was caused to vibrate in the field of a magnet and near the core, so that the strength of the magnet altered periodically as the diaphragm approached and receded, inducing a similarly vibrating current in the line-wire, which passed around the magnet. This current by an inverse operation, caused similar vibrations in a disk in the receiver, thus copying exactly the original sound. In such a telephone no battery was used. Thomas A. Edison devised another way to produce a vibratory current. The primary current of an induction-coil is passed through a block of carbon which has the property of changing its electrical conductivity in proportion to the mechanical pressure exerted upon it. The vibrating disk presses with varying force on the carbon, altering the current in the primary and hence the induced current in the secondary, which acts on a receiver similar to Bell's. The Blake transmitter, an early type once widely employed, used a hard carbon block on which rested a spring attached to the vibrating disk, whose movements changed the pressure on the surface between the carbon and the platinum contact through which the primary wire was joined. Its modern representative is a modification of the same principle, in which the vibration of the exterior diaphragm varies the pressure of an inner carbon plate or button upon a small receptacle filled with particles of granulated carbon, which form a number of loose joints in the path of the primary current. Of this type is the White solid-block transmitter, largely used in the United States, which is considerably more powerful than the Blake while the Gower Bell transmitter, much employed in Europe, achieves the same results through the loose joints formed by eight carbon pencils arranged in sets of four in connection with one central and eight exterior carbon blocks. With suitable ranged instruments it is now possible to transmit sounds upward of two thousand miles with the help of such aids to transmission as the Pupin coil. See PUPIN. The invention of the telephone, like that of the telegraph, has been a matter of much controversy. Among the contributors to it were Reis in Germany, Hughes in England, and Gray in the United States with those mentioned above.

Telephones are sometimes named from some feature of construction or operation, as carbon telephone (in which the diaphragm-vibrations vary, by pressure, the resistance of a carbon button), crown (a magneto-electric telephone having a coil on iron diaphragm and six permanent magnets with their like poles placed together in the center of the coil, their other poles being bent into contact with the diaphragm-edge), dual (having a double receiver by which the message can be received in both ears sometimes called *bitephone*), electrocapillary (in which the impulses are sent by variations in the electromotive force caused by the impact of sound-waves upon the surface of electrodes in capillary tubes), membrane (in which the sound acts on a thin vibrating membrane or its equivalent as a very thin sheet-iron disk), multiple (having several vibrating diaphragms for increasing the volume of sound), pile (having in its circuit a variable inductance, reaction (in which the currents induced in a wire coil attached to a diaphragm pass through electro-magnetic coils, and thus react on the diaphragm and strengthen its action) string (in an acoustic telephone), triple (having its mouthpieces between two earpieces so as to permit talking and hearing without moving) etc.

A word or expression used to express or designate some fixed or definite thing, a word having a limited and specific meaning, naming and characterizing some particular object, quality, state, or the like, especially, a technical word or expression, as in the sciences, arts, trades, and the like, *the term man, chemical terms, assumption is a law term*

The very term miser is a confession of the misery which attends avarice JOHN HARRIS *Mammon* p 63 in 1837 2. pl Significant or descriptive words, formal statements, set speech, as, they abused each other in no measured terms 3 Logic (1) A word, or a combination of words, such as may be the subject or the predicate of a proposition

Prepositions and articles are not terms but may help to form terms As language is of use in logic only as having meanings, the word term often indicates the meaning of an expression rather than the expression itself, as when we speak of understanding the terms of a proposition Logical terms may be classified by their nature or by their relations Classified by nature, they may be considered (1) as made up of marks, and hence as (a) positive or non-positive, according as these marks are present or absent, and (b) abstract or concrete, as the attributes are separated from or connected with objects or they may be considered (2) as embodying objects, and hence as (a) singular or universal regarding the number of objects embodied, and (b) connotative or non-connotative regarding the connection of the objects with their marks or they may be considered (3) as mere words, and hence as (a) *notante* or *symbolical*, according as they suggest or do not suggest their own marks, and (b) *simple* or *complex*, with regard to the number of words constituting the term Classified by relations, terms are (1) *relative* or *absolute*, according to their relations to one another, and (2) *compatible* or *incompatible*, according to their relations to the objects of which they are predicated See all the italicized words

(2) One of the three component elements of the syllogism, each of which is used twice

The middle term is the term through comparison of the other terms with which the conclusion embodying their agreement is reached The major term is the predicate of the conclusion, and is compared with the middle term in the major premise The minor term is the subject of the conclusion, and is compared with the middle term in the minor premise Compare SYLLOGISM, FIGURE MOOD, PREMISE, PROPOSITION

(3) The significance of a word treated as an element of a relation or as a specific object 4. A fixed period or definite limit of time, a designated or prescribed duration, as, the term of ten years, a term of office

Speelf (1) One of the legally appointed periods in the year during which courts sit (see TENNIS or COURT below) also, one of similar divisions of the year in colleges and schools (2) Same as a term for TENNIS (3) The limited duration of a term for years (4) *Scots Law* A certain time fixed by the court within which a party is required to produce evidence in support of his averment

5. The time during which anything exists, the period of duration, as, a long term of suffering 6 pl Obligations imposed by authority or assumed by contract, conditions offered, or offered and accepted, as, the terms of sale, I can not accept your terms

No surrender of any army not actually at the mercy of an antagonist was ever made without *terms* and these always define the military status of the surrendered

W T SHERMAN *Memoirs* vol n, p 361 [a 1875] 7. pl Hence, mutual footing, basis of agreement or understanding often preceded by on or upon, as, to be on good terms with oneself 8. That which determines the extent or boundary of anything, the utmost limit, termination, hence, a boundary-line, a dividing-mark 9 A specified date (1) One of the days commonly called in England and Ireland quarter-days, or one of the corresponding Scottish days (2) The day from which a domestic engaged at a hiring-fair dates his or her contract (3) A particular day or hour for making observations as in meteorology, terrestrial magnetism, etc Hence the expressions term-day, t-hour, t-observation, etc

10 pl The menstrual period 11 Ship-building A term-piece See phrases 12 Math (1) That which limits a line, surface, or volume, being a point, line, or surface (2) The antecedent or consequent of a ratio, the numerator or denominator of a fraction (3) One of the parts of an algebraic expression that are connected by the plus- and minus-signs 13 Astrol A part of a sign of the zodiac in which a planet is slightly dignified 14. pl [Archaic] Limiting conditions, controlling circumstances, as, the terms of royalty 15f. An image, statue, or pictorial representation of Terminus, the god of boundaries See TERMINUS, 3. terminal figure 16f. That to which anything should arrive, point of finality, issue [*< L terminus* (cf. terminus) a boundary] 17 Syn. article, condition, expression, member, name, phrase, word Term in its figurative uses always retains something of its literal sense of a boundary or limit The articles of a contract or other instrument are simply the portions into which it is divided for convenience the terms are the essential statements on which its validity depends—as it were the landmarks of a meaning or power, as the boundary of a contingent term which may become fixed in the happening of some contemplated event In logic a term is one of

the essential members of a proposition, the boundary of a statement in some one direction Thus in general use term is more restricted than word, expression, or phrase, a term is a word that limits meaning to a fixed point of statement or to a special class of subjects, as, when we speak of the definition of terms, that is of the key-words to any discussion, or we say that is a legal or scientific term See BOUNDARY, NITION

The testicles are highly specialized glands which secrete the essential part of the seminal fluid. The left testicle hangs somewhat lower than the right, its spermatic cord being a little longer. Each testicle is enclosed within a dense fibrous capsule and is surrounded, except posteriorly by a sack (the tunica vaginalis) which contains a small amount of lubricating fluid, so that it is freely movable within the scrotum and is thus less liable to injury. Between the testis and the skin are four layers of tissue more or less intimately united which divide the scrotum into two cavities for the two testes. The fibrous capsule enveloping the testicle sends processes into the gland dividing it into many lobules. Each of these lobules contains several minute secretory tubules from whose lining originates the spermatozoon, the male cell necessary for fertilization. *Reissner* *Ann Jelliffe The Standard Family Physician* pp 73, 74. Thas'si, 1 thas'oi 2 thā'si n Bib (Apocrypha) 1 Mac that, 1 thāt, 2 thāt, o [Those, 1 thōz, 2 thōz, pl] 1. The (one) specially designated an emphatic word of greater definitive force than *the*, and having reference to some person or thing mentioned, understood, or definitely pointed out, as, that man, that circumstance in this use sometimes an expression of surprise or contempt, as, will you go for that reason? she consorts with that fellow

2. Such followed by *that* or formerly by *as*, as, he was of that fame that soldiers win 3. The (one) there correlative to *this*, an alternative or distributive use often referring to that which is more remote in order, time, or place, as, do you choose *this* or *that* book? that cloak is mine, and *this* one is yours

Historically *that* is a neuter inflection of the demonstrative *the* that gave rise to the definite article *the* and retains its demonstrative, definitive, and restrictive force. Its various uses have led to its classification as an adjective, pronoun, conjunction, relative, and even an adverb, according to the syntactical function it appears to perform. See THAT, pron THAT, conj

that, pron [Thos, pl] 1. As a demonstrative (1) The person or thing implied, mentioned, understood, or especially pointed out often used for emphasis, as, see that, a deed so fell as that, those are not mine, nh, those were golden days (2) The person or thing there or in the second place correlative with *this*, as, *this* or *that*, it matters not

That often refers to a phrase or a clause, or to a thought understood as a single syntactical element as to denounce dishonor, that was his purpose, he rides well, that is, he has a good seat, he will come, and that soon The clause it represents may be introduced by a relative *as*, *that* which I do ye know not now When the relative is suppressed that has the force of a compound or indefinite relative as "We speak that we do know and testify that we have seen" (John II, 11) But in this use it has been superseded by *what* 2. As a relative who or which now simply demonstrative and commonly introducing a restrictive clause often preceded by the definite article

In Anglo-Saxon *that* and *the* were the regular relatives, *who*, *what*, and *which* being only interrogatives until they gradually assumed the force of relatives, and in some uses superseded *that* Thus we say Washington, who was the first President, is often called Father of his country But The Washington that emigrated to this country was his ancestor In the first sentence that could have been used formerly in the second, *who* may be used While *who* or *which* may be governed by a preposition, *that* used relatively can not be except as a preposition may be placed at the end of a predicative clause thus we say the rumor to which he referred or the rumor that he referred to When *that* is used to introduce a restriction it is unemphatic and is pronounced *as*, as, there is time enough for that that you see This juxtaposition of the demonstrative and relative *that*, however, is commonly avoided by the use of *that* which

In general *that* in its relative use may be regarded as restrictive, *who* or *which* as correlative, in this sense *that* being often nearly equivalent to *such* *as* and *who* or *which* to a conjunctive phrase introduced by *and* *as*, *since* or the like as all words that are signs of complex ideas furnish matter of mistake signifies rather 'all words such as have this quality of being complex' than 'all words since they are signs etc The uniform observance of this discrimination however, is restricted by the following limitations (1) Since *who* relates to persons only while *that* may equally well refer to things *who* is used instead of *that* even in restrictive clauses when the personal element is to be made

prominent "The disciples that constituted the early church" is less vivid than "The disciples who constituted the early church." (2) Since *that* requires its governing preposition to be placed at the end of the clause, many speakers and writers prefer the use of *which* in such expressions as "the faith that the martyrs died for," changing it to the faith for which the martyrs died on the ground of dignity and ease of style (3) Since *that* is not only a relative pronoun, but also an adjective, a conjunction, and a demonstrative pronoun, *who* or *which*, or some other construction, may be used to avoid an infelicitous accumulation of *that*'s in a sentence. For "I am told that that man that brought you that message said that" may be substituted "I am told that the man who brought you the message said so" [*< AS that, that, < pronom th- (demonst)*]

that, adv 1. [Colloq or Prov] In such manner or degree; eo, as, I am that perplexed that I can not understand it

That used adverbially is wholly inexpressible He was that sick that could only be tolerated if an ellipsis such as he was (to) that (degreed) sick could be supposed, but that is more than can be done and the expression is therefore regarded as an unpardonable vulgarism. FRANK H VIZETELLY *Deal-Book of Errors in English p 209 [c 1911]*

2. [Colloq] To such an extent or degree used with adjectives or adverbs of quantity, as, he was that strong that, conj [That is used primarily to connect the substantive sentence as a subordinate clause with its principal sentence. Beginning with the simple relation of fact or matter of fact, it takes in relations of purpose, reason, consequence result etc]

The conjunction *that* is in English is the most comprehensive sense the conjunction of the subordinate sentence generally so that it was once attached to almost all conjunctions as it still is or may be subjected to some. MATTHEW *English Grammar p 42 [c 1877]*

1. As a fact that introducing a fact, as, we all know that sin and sorrow go together 2. So that, in order that, to the effect that introducing a reason or purpose, an object or tendency, as, he told me this that it might encourage me Compare MAY, v 3 For the reason that, seeing that, on the ground that, inasmuch as, because, since introducing a reason

She told me for the dancer I had pass'd. And I lov'd her 'till she did pity them. SHAKESPEARE *Othello act 1, sc 3*

4. As a result introducing a result, consequence, or effect generally as correlative to *so* or *such*, as, he lied so profusely that he died 5. As a consequence introducing, in elliptical form, an observation of surprise, or strong and sudden emotion, the ellipsis furnishing the reason of which this is the consequent, as, O, that he should use me thus! 6. Would that expressing earnest hope, and usually preceded by *O*, as, O that I were dead! 7. At which time when, as, was it not last week that he was to have written? the day came that she wept no more 8. Used emphatically, after a preposition, adverb, or conjunction, such word itself becoming conjunctive, as, after that he had spoken, I do not know but that you are right sometimes as a Gallicism to avoid repetition of a preceding conjunction, as, altho' I'm old and tho' I am weary, I am still equal to the task

That as a conjunction retains much of its force as a demonstrative pronoun and was considered by Horne Tooke and others to be oftentimes nothing else Thus the sentence 'I am told that you are miserable' might be transposed into 'You are miserable I am told that'

The term of the theater as it arose among the Greeks  
was the *paideia*, or circular dancing-place, for the  
performance of the choros dances in the worship of Dionysos.  
The altar stood in the middle, and the open auditorium,  
which in Greek theaters is always built on the side of a hill,  
rose in tiers of stone seats (traversed by open aisles radiat-  
ing from the center) in a semicircular shape about it. The  
theater at Athens is said to have held nearly 30 000 per-  
sons. As the actor became differentiated from the dancer  
or chorus, a platform or "speaking-place," and dressing-  
booths (constituting the stage-buildings or *skene*) were  
added at the back of the orchestra. Roman architecture

The drama of the middle ages was performed  
in temporary booths by traveling players. See *DRAMA*.  
With the revival of the secular drama the first permanent  
playhouse in London was erected by and licensed to the  
father of Richard Burbage, the actor, in 1576-1577, and was  
soon followed by the famous *Globe Theater* (identified with  
Shakespeare) and others. The commonest plan was octagonal,  
with the stage in the center and boxes and pit sur-  
rounding it on every side except that of the greenroom.  
Wooden theaters were gradually replaced by structures of  
stone and in the last part of the 17th century scenery was  
introduced.

A portable instrument for measuring horizontal and (generally) vertical angles. It comprises a small telescope turning on a vertical axis through the center of a horizontal graduated circle, and also on a horizontal axis by which it may be pointed at any elevation. 2. One of several instruments constructed on the same principle, usually having some additional mechanism.

When a vertical circle is attached to the axis of the telescope it is an *altazimuth*. If a level also is added to the telescope it becomes a *universal instrument*. A compass-needle at the center of the horizontal circle is used in the *surveyor's transit*. The theodolite is used in Europe but largely displaced in the United States by the *transit*, which differs by being so swung that the telescope may be reversed for a back-sight without lifting it from its bearings. 3. *Class Antiq* A treatise or poem on the nature and worship of the gods, as a poem like that of Hesiod, a philosophical treatise, like Cicero's *De Natura Deorum*, or a political treatise on the religious establishment of the state [*< F theologie, < LL theologia, < Gr theologia, < theos, god, + logos, speak*].

**Syn**, see RELIGION — **Biblical theology**, the method of theological science that aims to investigate doctrines in their historical environment and development, in connection with the various books of the Bible.

The accepted movement of *Biblical Theology* is historical; it traces the unfolding of revelation and experience in successive ages. The stress is on the chronological setting and the process in time. C D HARTMAN in *Horford Sem Record* June–August, 1894, p 286.

— **New England t**, the phases of Puritan theology developed in the orthodox Congregational churches of New England, specifically those developed through reaction from the teachings of Jonathan Edwards, and having their chief centers at Andover and New Haven. It includes Hopkinsianism, Emmonsianism, Trinitarianism, Andoverism, etc. — **Oberlin t**, the theological views inculcated at Oberlin College by the Rev. Charles G. Finney and his associates, a mitigated form of Calvinism — **systematic t**, 1 The method of theological science that aims to construct the materials furnished by Biblical theology, exegetical theology, etc., into coherent scientific system, with due regard to philosophical method and the *ontology of faith* (which see). 2 Same as **THEOLOGICAL SCIENCE** — **t**, of the covenants same as **FEDERAL THEOLOGY**.

**the-o-ma-chist**, *n* 1. One who battles against a god or the gods. 2. Any one resisting God or divine influence — **the-o-ma-chy**, *n* 1. A combat with the gods, as that waged by the Titans. 2. the-o-rem, 1 th-er-em, 2 the-o-rem, n [*Rare*] To put into the form of a theorem

the-o-rem, n 1. A proposition not self-evident that is demonstrably true or acknowledged as such, a proposition the validity of which is capable of being established by reasoning

Every machine is a solidified mechanical theorem. *Spruce Education* p 46 [A 1889] 2. *Math* (1) *Geom* A proposition setting forth something to be proved, as opposed to problem (2) *Alg* A rule or law formulated in symbols, or the directory of an operation (3) See PAPER [*L. theorema*, < *Gr. theōrēma*, < *theōrēō*, look at, < *theōrō*, see]

Abel's theorem (*Math*), an analytical theorem employed to reduce the sum of a number of Abelian integrals having the same integrand to the sum of a lesser number of the like kind - addition t. (*Math*), a theorem stated analytically by expressing a function of the sum of two variables in terms of the same or its functions of the variables taken separately - Barharin's t., the theorem that the Euclidean Lobachevskian and Riemannian spaces all contain surfaces of constant curvature whose geodesics have the metric properties of ordinary straight lines - Bernoulli's t. (*Math*), in the theory of probability, the theorem that in a sufficiently large number of trials the ratio of the number of occurrences of an event to the total number of the trials may be made to differ from the probability of the event's happening in any one of the trials by less than any quantity assigned - Branchon's t. (*Math*), a statement that the three diagonals of every hexagon circumscribed about a conic meet in a point the reciprocal of Pascal's theorem - Carnot's t. Carnot's principle See PRINCIPLE - De Morgan's t. (*Logic*), the theorem enunciated by A. De Morgan, that, in any two classes, the negative of the sum equals the product of the negatives, and the negative of the product equals the sum of the negatives - Dupin's t. (*Geom*) the theorem that the intersecting lines of surfaces of a triply orthogonal system are also lines of curvature - Fermat's t., see FERMAT - Fourier's t., the theorem of J. B. Fourier (1768-1830) that every periodic motion may be resolved into simple harmonic motions whose periods are aliquot parts of that of the original motion as the complex motion of a vibrating string is resolved by the ear into a fundamental and a series of harmonics - Gauss's t. (*Elec*), a theorem used in the analytical treatment of electricity, magnetism, gravitation, and light, to the effect that the total flux of force through any closed surface equals 4π times the quantity of the source of flux contained within it

Green's theorems, theorems in the theory of attractions expressing the relations between the quantity of a substance in a region and that which passes its boundary - Heron's t. (*Math*), same as HERON'S FORMULA - hypotenuse t., same as PYTHAGOREAN THEOREM - Jacobi's theorem t. (*Geom*), the statement that the radius of curvature of a curve (when such line is a plane curve) makes a constant angle with the tangent planes to the surface along the curve - due to F. Joachimsthal (1818-1861) - Laurent's t. (*Math*), a theorem giving the expansion in an infinite, converging series of a function within a ring-shaped region bounded by concentric circles - MacLaurin's t., a formula in differential calculus by which a function is developed according to ascending powers of the variable a corollary from Taylor's theorem - Meusnier's t., see MEUSNIER - negative t., a theorem expressing the possibility of the truth of a proposition - Pappus's t., any one of various theorems due to the Greek mathematician Pappus (3d century A. D.) - particular t., a theorem concerned with a particular quantity, opposed to universal theorem - Pascal's t., the theorem asserting that the opposite sides of a hexagon inscribed in a conic meet in three points on the same right line - remainder t., the theorem that a rational integral algebraic function of x when divided by (x-a), leaves as a remainder the same function of a - Sturm's t., a theorem for the immediate determination of the number of real roots between any two given limits β, α - Taylor's t., a theorem expressing the value assumed by a function of a single variable when that variable is increased by an increment, in terms of the original function and the increment - t. of Le Châtelier (*Phys Chem*), the theorem that in a thermodynamic system the change resulting from alteration of one factor is always such as to tend to alter that factor in an opposite direction - t. of three moments (*Mech*), a theorem for finding the bending moments at any three consecutive supports of a continuous girder - the-o-rem-at-ic, a Pertaining to or of the nature of a theorem, comprised in or consisting of a theorem or theorems the-o-rem-at-ic-al; the-o-rem-at-ic-the-o-rem-at-ic-tist, n A formulator of theorems

Pertaining to or of the nature of theory Specif (1) Directed to knowledge for its own sake without respect to applications, purely scientific or speculative, as distinguished from practical

The terms theory and theoretical are properly used in opposition to the terms practice and practical in this sense they were exclusively employed by the ancients and in this sense they are almost exclusively employed by the continental philosophers

HAMILTON *Metaphysics* lect x p 120 [o & L 1859] (2) Based on or consisting in speculation 2. Pertaining to or of the nature of a verified or an explanatory hypothesis, as, theoretical harmonies of the Gospels

3. Of or pertaining to the immediate apprehension and feeling of the beautiful used by Ruskin

No term can be more accurate or convenient than that employed by Greeks *theoretic* which I pray permission therefore always to use and to call the operation of the faculty itself *Theoria* *Ruskin Modern Painters* vol. II, pt. II, § 11 [w & L 1859]

4. In Kantianism, referring to fact rather than conduct, or to what is, as distinguished from what should be [*Gr. theōrētikos < theōrō* see THEORY] - theoretic diagram, a drawing or diagram showing the relative position and parts of a flower's organs including organs undeveloped but belonging in theory to a complete flower - t. geometry, same as SPECULATIVE GEOMETRY - t. pendu-

the-o-ri-a, 1 th-er-ri-a, 2 the-o-ri-a, n [-E. 1-1, 2-2, pl] 1. *Gr. Antiq* An embassy of a state to the Panhellenic festivals or to another state 2. Philosophic reasoning, speculation 3. The operation of the faculty that perceives and feels the beautiful, especially the beautiful as moral rather than sensual or intellectual used by Ruskin [*Gr. theōria*, see THEORY]

the-or'ic, 1 th-er-ik, 2 the-or'ic, a *Gr. Antiq* Belonging or relating to public spectacles, or to the theatrical - *Gr. theōrikos*, < *theōrō*, see THEORY] - theoric fund, same as THEATRON

the-or'ic-t, a Expert in theory, theoretical, hypothetical the-or'ic-t; the-or'ic-t, n 1. Speculative knowledge, theory, speculation 2. A speculative or hypothetical treatise

the-or'ic-on, 1 th-er-ri-on, 2 the-or'ic-on, n [-CA, pl] *Gr. Antiq* Money appropriated from the public treasury of Athens ostensibly to buy seats at the theater for poor citizens extended also to other festivals generally in the plural - *Gr. theōrikos*, neut. of *theōrikos*, see THEORIC

the-o-ris-t, 1 th-er-ris-t, 2 the-o-ris-t, n A constructor of theories, one given to theorizing often used in disparagement

the-o-rize, 1 th-er-rize, 2 the-o-rize, v [-RIZEN, -RIZ'ING, pl] 1. To convince by theorizing II. To form or express theories speculate the-o-rize:

- the-o-riz-a-tion, n The act or process of theorizing also, n theory - the-o-riz'er or -ris'er, n A theorist

the-o-ry, 1 th-er-ry, 2 the-o-ry, n [-RIES, 1-nz, 2-ng, pl] 1. The act or result of looking into or contemplating any object or group of objects, or any event or series of events, beholding, viewing, speculation 2. Hence (1) A mental plan or scheme framed to agree with the observed facts and designed as a rational explanation of them In this sense, customarily understood to be a scheme of explanation which comes nearer to being a law verifiable by all others on the basis of observation and experiment than does n hypothesis (2) [Colloq.] Mere hypothesis or speculation hence, an individual view idea, as, the soldier's theory of duty

A theory may be defined - as organic development to the understanding of the relations between the parts of any systematic whole - *Dr. Quincy Essay on Philosophical Writers*, Kant in vol. I, note 5 p 153 [r & L 1856]

3. More specif, n systematic generalization, entertained in the development of some one of the positive sciences, as furnishing the most satisfactory account or rational explanation of a series or group of its phenomena an elaborate and well-sustained working hypothesis designed to embrace temporarily, and to further the continued investigation of, some particular science or one of its branches

4. A body of the fundamental principles underlying any science or application of a science 5. The pure science or abstract knowledge, as opposed to the practice of any art, as, the theory and practice of medicine

Theory is a generalization of the principles on which practice proceeds

HAMILTON *Metaphysics* lect x p 120 [o & L 1859]

6. *Math* An arrangement of results, or a body of theorems, presenting a systematic view of some subject, as, the theory of functions, the theory of equations 7. *Mus* The science of composition, as distinguished from the art of execution 8. Contemplation [*Gr. theōria* < *L. theoria* < *Gr. theōrō* viewing, theory, < *theōrō* see THEOREM] *Spz* see HYPOTHESIS IDEA

-action theory (*Psychophy*), a theory which correlates the different attributes of the conscious sensations with different phases of the sensory processes - or actually t. (*Psychol*) the theory that mindless activity is opposed to substantiality theory - Ampère's t., a hypothesis proposed by Ampère to account for magnetism by the presence in the ultimate particles of matter of electric currents constantly flowing through closed circuits According to this theory magnetism occurs when the direction of these currents is the same, and ceases when by flowing in opposite directions they neutralize each other The coercive force of a magnetic body is generated by the resistance offered by these currents to any change in their plane of direction - analytical t., the critical view of the Old Testament Scriptures opposed to the traditional theory, especially in its application to the Pentateuch It affirms that the Pentateuch is not of Mosaic origin, but a later compilation from various original documents A common form is that there are four documents in the present Pentateuch - the First Elohist or Priestly Codex [P or P C, or Q], the Second Elohist [E], the Jehovahist [J], and the Deuteronomist [D] and that there were in Pentateuchal legislation at least three distinct codes of law - the covenant or judicial code (*Ex. xx-xxiv, xxvii*), the prophetic or popular code (*in Deuteronomy*) and the priestly code (*in Leviticus*) the theory of Graf as further developed by evolutionary methods

The four dominant analytical theories of the 19th century have been in order of time the documentary, the fragmentary, the supplementary, and the evolutionary or renewed documentary theories - Carnot's t., the theory that heat is an indestructible agency doing work by fall of temperature and absorbing it by rise of temperature - Dalton's t., atomic theory See ATOMIC DALTON - disintegration t. -Theosophical Society, a society founded in New York city, Nov. 17, 1875, by H. P. Blavatsky and H. S. Olcott, for the study and spread of theosophy

The three objects of the [Theosophical] society are (1) to form a nucleus of the universal brotherhood of humanity without distinction of race, creed, sex, caste or color (2) to encourage the study of comparative religion philosophy and science (3) to investigate the unexplained laws of nature and the powers latent in man

In 1895, William Quan Judge, then vice-president of the society led a secession movement which resulted in a separation therefrom of a large number of the American and some of the European members The seceding body, however, soon divided into two bodies one of which is known as the Universal Brotherhood and Theosophical Society

Theosophy differs from philosophy in that it starts from a transcendental apprehension of deity to explain the universe, and does not generalize from phenomena to the being and attributes of God and from religious mysticism in that it does not content itself with the relations of the soul to God, but speculates on the constitution and course of nature As a frequently recurring tendency of the mind, especially among Orientals theosophy has appeared in many forms as in the speculations of the old Egyptians and of the Neo-Platonists and Gnostics in the avatars of Brahmanism, in calism, and in the speculations of Schelling, Baader, Swedenborg, etc

Lead is taken as the standard metal. The distance of a point on the line of antimony above or below the lead line (0), represents in microvolts the thermoelectric power of that metal with respect to lead at the temperature denoted by the distance of the point from the left of the diagram. Thus at 300°C iron has a thermoelectric power of -2.5 microvolts with respect to lead. Where two lines cross they have the same thermoelectric power and will give no thermo-current. This can be seen in the diagram in a thermopile at a mean temperature of 200°C. a, palladium b, platinum c, iron d, tin, f, aluminum g, brass h, copper i, silver j, zinc, k, cadmium.

**ther'mo-e-lec'tric'ity**, 1 *thūrm'o-e-lek'tris'ity*, 2 *thērm'o-e-lec'tric'ity*, *n* Electricity generated by differences of temperature, especially that due to the fact that two different metals in contact show a difference of electric potential that varies with the temperature of the point of junction. Hence, if two conductors of different metals are joined end to end, so as to form a closed circuit, and the points of junction are kept at different temperatures, a continuous current of electricity will flow through the circuit. The thermoelectric power of different metals varies with the metal and with the mean temperature. See *THERMOELECTRIC DIAGRAM*.

**ther'mo-m'e-ter**, 1 *thērm'o-mē'ter*, 2 *thērm'o-m'e-ter*, *n* 1. An instrument for measuring temperature. See *TEMPERATURE*. Thermometers usually act upon the principle that change of temperature causes greater alteration in the dimensions of one body than of another, thus air, mercury, alcohol, etc., within a glass or metallic envelope expand more than the envelope and the difference of expansion becomes a measure of the temperature. The ordinary glass thermometer consists of a capillary tube or stem with bulb containing mercury. The temperature is determined by reading the position of the greatest natural color (reported by the end of the liquid column in the stem) on a scale of conventional degrees. The temperature at which pure ice melts and at which steam escapes from pure water holding under atmospheric pressure are employed universally on the thermometer — 59° of Sydney, 63° of New Orleans, 68° of Calcutta, 73.3° 98° is blood-heat 130° represents highest shade temperature (recorded from New South Wales), 600° is the melting-point of lead at 762° coal unites at 1951° gold melts at 2500° steel melts 4000° represents the heat of a Bessemer furnace 56° temperature 80° sum-

into 80 degrees in the mer heat.  
The Celsius scale (in disuse) is the reverse of this. In the Fahrenheit scale the freezing-point is 32° and the boiling-point 212°. To reduce degrees of one scale to those of another, the following formulas will serve, the initial letters representing the respective scales  
 $F = \frac{9}{5}(C + 32) = \frac{9}{5}C + 32$   
 $C = \frac{5}{9}(F - 32) = \frac{5}{9}F - 17.8$   
 $R = \frac{9}{5}(F - 32) = \frac{9}{5}C$

2. Figuratively, anything that indicates temperature, as a rheumatic joint. [*< THERMO- + -METR*]

— *chromatic thermometer*, an instrument for approximately measuring temperatures, based upon the principle that if the edge of a glass plate be placed upon a highly heated body, and a beam of polarized light be passed through the glass, colored fringes, varying in appearance with the temperature are developed — *Kinnersley's t* (Elec), a device for indicating the sudden expansion of gases produced by an electrical discharge or the heating effect caused by a brush discharge — *metastatic t* in thermocouple possessing a small cavity at the top, by means of which some of the mercury may be abstracted from the bore, thus changing the sensitiveness of the instrument — *nocturnal radiation t*, an instrument registering minimum temperatures, and exposed near blades of grass, leaves, plants, etc.,

The Four Principal Thermometers Compared

In such manner as to indicate the lowest temperature, due to the radiation of heat during the night — *terrestrial-minimum t*; *terrestrial-radiation t*; — *resistance t*, an instrument indicating, by means of the change in electrical conductivity of wires with temperature, the temperature of any given wire or its environment — *solar-radiation t*, an actinometer — *ther'mo-e-for-screen*, *n* Meteor A device designed to screen a thermometer from agencies unfavorable to the registration of the true air temperature, as the direct rays of the sun.

Thermometers are often named (1) from their use as clinical thermometer (for ascertaining the temperature of the body), deep-sea t. (having the bulb protected to resist the pressure at great depths), earth, ground, or soil t. (for testing the temperature at some depth), incubating t., sounding t. (a deep-sea thermometer), submarine t. (bearing a chamber for bringing up water from great depths, or any deep-sea thermometer), (2) from some feature of construction or arrangement, as, alarm t. (adjusted to ring an alarm-bell when the temperature reaches a certain point), balance t. (swinging on a pivot and recording on an arc, or adjusting a damper by means of its rise and fall), black-bulb t. (having a blackened bulb by which to increase the absorption of heat used as an actinometer), differential t. (having two air-bulbs connected by a U tube, containing colored liquid, so that when the bulbs are exposed to different temperatures a shifting of the liquid in the tube will be caused by the difference of expansion of air in the bulbs), dry-bulb t. (that one of the two thermometers in a psychrometer which is left dry), electrical t. (using electricity, as in a coil whose resistance increases with the temperature, or a thermocouple), maximum t. (registering the highest or maximum temperature occurring after it has been set, as by a bit of wire which is left by the horizontal mercury column at its farthest point), minimum t. (constructed to register the lowest or minimum temperature occurring after it has been set, as by a hollow bit of glass tube which a horizontal alcohol-column draws with it by capillary attraction on to its lowest point but can not push forward), outflow t. (fitted with an outlet for the mercury to flow into a weighing-vessel or measuring-tube as desired, when the temperature exceeds a given point) registering t. (giving a record as of maximum or minimum temperature), sling or whirling t. (the required data, as, air t. (using dry bulb of great accuracy, and used as an ultimate standard, gas t. (employed for very low temperatures and named for the gas used as helium t., hydrogen t., nitrogen t., pentane t., petroleum ether t., etc.), mercury t. or mercurial t., metallic or bimetallic t. (employing the differential contraction of two metals, and usually indicating by means of a pointer on a dial), platinum t. (using the variation, with temperature, of the electrical resistance of a platinum wire), spirit t. (employing alcohol or ether).

1. A bass part accompanied by shorthand marks, usual

method of writing the chords that are given in full in the treble.

ly numerals, denoting intervals, placed below the staff, to indicate the general harmony, also, the system of marks thus used.

In former times much music was written thus especially in the 18th century, when the most complicated organ accompaniments were thus represented on a single staff beneath the vocal score. Chords were never printed in full, as now, and every musician was expected to be able to play the entire harmony from a figured bass. The system is now generally in disuse, the taught as a discipline.

Down to the latter part of the 19th century the art of playing from a *thoroughbass* still survived—and even flourished—among our best Cathedral organists. Tule and Goss played with infinite greater effect from the old comes belonging to their Cathedral libraries than from modern arrangements which left no room for the exercise of their skill. W. S. ROCKSTAR in *Grove's Dict. of Music* vol. v, p. 93 [March '10].

Thumb-ring of a Mongolian Archer

**thun'der**, 1 *thun'dar*, 2 *thūn'der*, *r. i. t.* 1. To send forth with a noise resembling or suggestive of thunder, utter with vehemence, as, the cannon *thundered*.  
 Add soiled with all the vices of the times.  
*Thunder* damnation on their neighbour's crimes!  
*JUVENAL Satires tr. by Gifford, satire n. 130*

2. [Rare] To inflict violently and noisily, as blows, do, make, or use so as to produce a resounding noise.  
 II. 1. To give forth a peal or peals of thunder often impersonal, as *thunders*. 2. To make a noise like or suggestive of thunder, make a deep reverberative noise. 3. To utter vehement denunciation, threats, or commands. 4. To speak with power, as official or rhetorical [*AS thun'ran*, < *thunor*, thunder]

**thun'der**, *n.* 1. The sound that follows lightning, due to disturbance of the air by the electrical discharge from a single loud report to a long reverberation. As sound travels at the rate of about 1,100 feet per second, while the passage of light or lightning is almost instantaneous, the interval between the appearance of a lightning flash and its after-roll of thunder may be taken as representing roughly the distance of the lightning from the observer.  
 If the lightning is at a greater distance than 14 or 15 miles, *thunder* is no longer heard. The rolling of *thunder*, the alternate rise and fall of the sound, occurs ordinarily with sheet lightning less so with forked lightning when the sound is short and crackling. Various causes contribute to produce the rolling one cause is the reflection from the ground from clouds and even from layers of air of unequal density. Lightning, too, is not a single discharge but a series of discharges, each of which gives rise to a particular sound and which are variously reflected by objects which they meet on their path.  
*GARDNER Physics tr. by Atkinson p 1102 [w v & co '05]*

2. Any loud, rumbling, roaring, or booming noise, as, the *thunder* of a cataract, the *thunders* of cannon. 3. An awful or startling denunciation or threat; also, a vehement or powerful utterance, oratorical or other, as, Webster hurled his *thunders* against nullification.  
 4. [Archaic] A lightning-stroke, thunderbolt, as, Jupiter was believed to hurl his *thunders* at his enemies.  
*Thunder* is used colloquially in various minced oaths, as, *by thunder!* go to! [*AS thunor*, thunder]

The principles that rules in tragedy and brings about the situation of extremity and degradation has varied in different ages and dramas Fate and its workings are the favorite themes of Greek tragedy, which grew out of the worship of Dionysos In Rome the germ of tragedy was found in the comedía palliata, which was borrowed from the Greeks and that part of Roman tragedy which has survived is associated with Seneca whose plays are adaptations of the works of Sophocles and Euripides are declined for reading rather than for the stage The great French writers who founded the classical tragedy of France took him as their model Forms of the later Latin drama were the comedía togata, which dealt with Roman life and manners, comedía praetexta, named from the magisterial dress and approaching nearest to true tragedy, comedía trahentia, named from the equestrian dress and comedía fabularia, which treated of tavern or low life In modern tragedy the characteristic feature is a conflict between the forces of a strong human nature and outside forces, either blind and physical or moral and spiritual, affording a strong contrast to the ancient Greek conception

Surely, *a priori*, intuitive, original, primordial, transcendental Intuitive truths are those which are in the mind independently of all experience not being derived from experience nor limited by it, as that the whole is greater than a part, or that things which are equal to the same thing are equal to one another. All *intuitive* truths or beliefs are *transcendental*. But *transcendental* is a wider term than *intuitive*, including all within the limits of thought that is not derived from experience, as the ideas of space and time, the laws of logic, the principles of mathematics included under many genera; but transcends them all so the properties or affections of being have also been called *transcendental*. "K-F Vocob Philos p 530 "Transcendent he [Kant] employed to denote what is wholly beyond experience, being neither given as an a posteriori nor a priori element of cognition—what therefore transcends every category of thought." K-F Vocob Philos p 531 Transcendental has been applied in the language of the "transcendentalists" to man's superior nature, his higher faculties, his divine and human, so far as they are capable of being known to man. Transcendent, transcendental, and intuitive are opposed to empirical, or, according to the philosophy of

tub'ho'e, 1 tub'ō, 2 tūb'ō, *n* **Potho'** A contagious disease of tropical countries, especially prevalent among the African races, characterized by tubercles and tumors resembling raspberries, followed by ulceration, the yaws

tub'by, 1 tub'ī, 2 tūb'y, *n* 1. Resembling a tub in form, tub-shaped, round-bellied 2. Dull and wooden in sound, like an empty tub said of musical instruments

tube, 1 tūb, 2 tūb, *cf* [tuben, run'no] 1. To fit or furnish with a tube or tubes, as, to tube a boiler 2. To enclose or receive in a tube or tubes, as, to tube yarn

tube, *n* 1. A long hollow cylindrical body, as of wood, metal, rubber, or glass, generally used for the conveyance of something through it, but often as a receptacle for holding something, a pipe

In most of their applications there is no difference in sense between *tube* and *pipe*, generally, however, *tube* is used instead of *pipe* when the latter is referred to as not made of a rigid material, or when it is used as a receptacle and not as a conduit, as, a rubber tube tubes of artists colors test-tubes, the water-tubes of a boiler As used by machinists, *tube* and *pipe* are often distinguished by an arbitrary but fixed association with certain words, when there is no apparent difference in the sense

Tubes are named from their inventors as Bourdon tube (a pressure-gage), Braun *t* (for investing cathode rays), Crookes *t* (for showing phenomena of tenuous gases), Held *t* and Galloway *t* (water-tubes for boilers), Geissler *t* (for investigating electrical discharges in a gas), Glinzky *t* (used in fractional distillation) Javal *t* (a turbine tube), Lenard *t* (for investigating the transmission of cathode rays), Pitot *t* (for measuring the velocity of fluids), Roentgen *t*. (an X-ray tube), Servé *t*. (a dye-tube for boilers)

The action of the gastric juice is chemical and it will only dissolve dead matters and it dissolves them when they are in tubes of metal as well as in the stomach, but it has no action upon living matter H DAVY *Consolations in Travel* *iv* p 211 [s] 1

2 Specif (1) The stock or main body of a wind-instrument (2) A cylindrical receptacle of thin flexible metal having a screw-cap when used for holding artists' colors, called also paint-tube (3) Same as painting-tube (4) The principal part of a modern breech-loading rifled gun, around which the steel jackets are shrunk to give the requisite strength

3 Anat A tubular organ, especially one conveying air, as, a bronchial tube 4 Bot Any elongated hollow part or organ, as the united part of a gamopetalous corolla, gamoepalous calyx, or monadelphous andræum, a hymenomycetous fungi, same as Pone, in pyrenomycetous fungi, the neck of the perithecium In the two latter senses, called also tubulus 5 Physics A surface conceived as formed by a continuous series of lines of force or action of any kind passing through or terminating at every point of a closed curve called tube of force, of induction, *t* of flow, according to the physical conception expressed by the lines

6 Zool A protective casing formed by some earthworms as well as by the larvae of certain insects 7 A subterranean tunnel *cf* *tubus*, tube

8 Astrustic tubes, a series of tubes designed for demonstrating the effect on musical pitch of their varying lengths and diameters — body'-tube, *n* The principal part of an organ pipe — carbon *t* (Chem), a cylindrical glass vessel used in the colorimetric determination of carbon in steel — conjugating-*t*, *n* Bot A tube formed by the fusing of two processes put forth by opposite cells in two adjacent algae of the genus *Spirogyra* conjugating-canals — corolla *t*, *n* The basal part of a gamopetalous corolla — disstillng-*t*, *n* An apparatus for the fractional distillation of liquids by means of which only the vapor of that liquid which is boiled by the heat of the water in the jacket is allowed to pass over In certain cases the tubes are used to convey the passing over of spray — end-on *t*, a Geissler tube so constructed that the incandescent gas may be viewed through the ends of the tube — foetus-*t*, *n* Physics A form of Roentgen ray tube in which to intensify the effect the cathode rays are focused upon the anticathode — fractionating-*t*, *n* Chem A tube which is connected with a flask, used in facilitating fractional distillation — hard *t* (Elec), *n* Roentgen tube whose vacuum is unusually high — milk-tube, *n* A glass tube, sometimes palladium-*t*, a glass tube employed in the volumetric analysis of gases — percent *t*, a tube for measuring the percentage of cream in milk a form of lactometer — perlethoridal *t*. (Zool), the layer of cells surrounding the notocord — reduction-*t*, *n* Chem A small glass tube, fusible with difficulty, expanded to a bulb at the closed end, in which substances like mercury and arsenic compounds are by beating with suitable reagents changed to the metallic state and yield the volatilized metal condensed on the cooler portion of the tube Also, a hard glass tube open at both ends, and made of or coated with the material of which metallic oxides may be reduced to the metallic state by heating in a current of hydrogen — soft *t*, in radiography, an X-ray tube of low penetrating power — two-pipe *t*. The power or faculty by which one understands (1) The sum of the mental powers by which knowledge is acquired, retained and extended the faculty of perceiving distinctions distinguishing the true and the false and of adapting means to ends intelligence mind (2) The comparative or discursive faculty, or faculty of thinking, the power of apprehending relations and making inferences from them  
 The distinction between reason as intuitive apprehension, or immediate seizure of the truths of facts or ideas of value, and the understanding as elaborative, is very old Plato and Aristotle both recognized it, altho in different ways The Schoolmen preserved it but since they used the word ratio for discursive faculty, or understanding, their usage led to confusion through the employment of the English word reason in both senses. Coleridge and others, however, strove to reestablish the distinction as emphasized by Kant and Hegel in Germany and embodied in the words Vernunft (reason) and Verstand (understanding) but it has been adhered to only somewhat fitfully and irregularly in subsequent psychological and philosophical writings A certain justification for Locke's dictum "The power of perception is that which we call the understanding," is to be found in the fact that all sense-perception and consciousness involve interpretation See APPREHENSION, INTUITION, p. 2480  
 I may here notice that I use the term understanding not for the noetic faculty, intellect proper, or place of principles but for

the diagnostic or discursive faculty in its widest significance for the faculty of relations or comparison and thus in the meaning in which Verstand is now employed by the Germans

Wm HAMILTON *Discussion on Philosophy* vol 1 p 12 [in 1853]  
The understanding may be likened to the fingers of the mind whereby many ideas are collected in one grasp and so brought under a single and common idea or denomination

G S MORRIS *Kant's Critique of Pure Reason* p 84 [a c 1882]  
The facts or elements of a case as apprehended by any one intelligence, an individual view of a case, an opinion, as, what is your understanding of Hamlet's madness? 4 A practical agreement or consensus of opinion between two or more persons, especially an informal or confidential compact, also, the subject of such compact, the thing agreed on, sometimes, an arrangement or settlement of differences, or of disputed points, as, that was not our understanding, the brothers have come at last to an understanding

In a moment he had established between himself and his soldiers that understanding by which more than by cannon or bayonet victories are won PETER BAYNE *Essays Bonaparte* in second series p 183 [a c 1867]

duce unit magnetic flux (see ORSTED, below), **u. magnetomotive force** (M M F), a magnetomotive force producing unit magnetic flux through a magnetic circuit with unit reluctance, a magnetomotive force producing unit magnetizing force through unit length of magnetic circuit (see OILBERT, below), **u. electromotive force** (E M F), the electromotive force in a circuit which does unit work in unit time when the unit current is flowing, the E M F produced in a circuit in which there is unit change in the magnetic flux in unit time, **u. resistance**, the resistance of a circuit in which unit electromotive force produces unit current, **u. of self-inductance** or **of mutual inductance**, an inductance such that unit electromotive force is induced when the inducing current is changing at the rate of one unit in unit time.

The electrical units with their relations and their dimensions, according to both the electrostatic and the electromagnetic systems, are shown in the second column of the table of magnetic and electrical units. A practical system of electrical units of convenient magnitudes was established by the Electrical Congress (Paris, 1881). The ratio of a practical unit to the corresponding unit in the C G S electromagnetic system is some multiple of 10, as given in the table below. Any unit in practical use might, in a sense, be termed a practical unit, more properly, however, the practical units constitute a system derived from a fundamental unit of length of 10<sup>9</sup> centimeters (an earth-quadrant), a unit of mass of 10<sup>-11</sup> grams, and a unit of time of one second. Since the units in any consistent system are so related that a formula expressing a physical law will hold true for any such system if true for one, any such law, as Ohm's law, that the current is equal to the electromotive force divided by the resistance, holds equally true for C G S and practical units. Thus, practical units may be substituted in any one of the defining equations in the large table. For example, the capacity of a condenser expressed in farads is equal to the quantity of electricity in coulombs divided by the electromotive force in volts, and similar relations hold for the other units. The practical units, as defined by the International Congress of Electricians (Chicago, 1893), and confirmed in substance by the International Conference (London, 1903), are as follows: **u. of resistance**, the *international ohm*, represented by the resistance offered to an unvarying electric current at the temperature of melting ice by a column of mercury 144521 grams in mass, of a constant cross-sectional area, and 106.3 centimeters long, **u. of current**, the *international ampere*, represented by the unvarying current which, when passed through a solution of nitrate of silver in water, in accordance with certain specifications, deposits silver at the rate of 0.001118 of a gram per second in one second by the force, the *international volt*, the electromotive force that steadily applied to a conductor whose resistance is one international ohm, will produce a current of one international ampere, **u. of quantity**, the *international coulomb*, the quantity of electricity transferred by a current of one international ampere in one second, **u. of capacity**, the *international farad*, the capacity of a condenser charged to a potential of one international volt by one international coulomb **u. of work**, the *joule*, represented by the energy expended in one second by an international ampere in an international ohm, **u. of power**, the *watt*, represented by the work done at the rate of one joule per second, **u. of inductance**, the *henry*, the inductance in a circuit when the electromotive force induced in this circuit is one international volt, while the inducing current varies at the rate of one ampere per second. The practical units are all defined in terms of the ohm and ampere as specified above. The units of the practical or ohm-ampere system, and the relations between them and the C G S units are as follows:

PHYSICAL QUANTITY	Unit in Practical or Ohm-ampere System	Ratio of Practical Unit to C G S Unit	
		Electromagnetic	Electrostatic
Quantity	Coulomb	10 <sup>-1</sup>	$\sqrt{v} \times 10^{-1} = 3 \times 10^9$
Current	Ampere	10 <sup>-1</sup>	$v \times 10^{-1} = 3 \times 10^9$
Electromotive force	Volt	10 <sup>8</sup>	$10^8 - v = 1/3 \times 10^{-12}$
Resistance	Ohm	10 <sup>9</sup>	$10^9 - v^2 = 1/3 \times 10^{-11}$
Capacity	Farad	10 <sup>-9</sup>	$v^2 \times 10^{-9} = 9 \times 10^{-11}$
Self-induction	Henry	10 <sup>9</sup>	$10^9 - v^2 = 1/3 \times 10^{-11}$
Mutual induction	Henry	10 <sup>9</sup>	$10^9 - v^2 = 1/3 \times 10^{-11}$
Work	Joule	10 <sup>7</sup>	10 <sup>7</sup>
Power	Watt	10 <sup>7</sup>	10 <sup>7</sup>

\*  $v$  = velocity of light =  $3 \times 10^{10}$  cm. per second

The magnetic units of the practical system are not used on account of their inconvenient magnitudes. The C G S electromagnetic units for these quantities are accordingly used and are commonly designated simply as C G S units. The International Electrical Congress at Paris, 1900, assigned the name *maxwell* to the C G S electromagnetic unit of flux,  $\Phi$ , and the name *gauss* to the C G S electromagnetic unit of flux-density,  $\mathcal{H}$ , one gauss being equal to one maxwell per normal square centimeter. Not uncommonly the gauss is also used as the unit of magnetic field,  $\mathcal{H}$ .

The gilbert is frequently used for the C G S unit of magnetomotive force, the same being produced by 7958 ampere-turn approximately, and the oersted, for the C G S unit of reluctance.

For other units, not treated in this article, see CALORY, and tables under COIN, MEASURE, and WEIGHT. — absolute unit, a unit whose value does not change with time or place — absolute u. of current (*Abs. C*), a current which when flowing through a conductor bent into the form of a circle of one centimeter radius, exerts one dyne

2. [u-] Pertaining to a unit; unital.

**U'ni-ta'ri-an**, *n*. 1. A member of any religious body that rejects the doctrine of the Trinity, one who holds to Unitarianism, specif. a Unitarian Congregationalist. See UNITARIANISM. 2. [u-] A believer in one and only one God, a monotheist.

3. [u-] *Philos.* A rejecter of dualism, especially of the form that involves the existence of an evil principle. 4. [u-] An upholder of unity or any unitary system, specif. a supporter of political centralization.

**U'ni-ta'ri-an-ism**, *n*. 1. *yū-ni-tā-rī-an-izm*; 2. *yū-ni-tā-rī-an-izm*, *n*. 1. The doctrine of those who deny the Trinity; the state of being a Unitarian.

Unitarianism has been held by individuals, and by many non-orthodox bodies of Christians, as in the present day by the Hicksite Friends, and in Great Britain by a small body that has separated from the Presbyterians, but the name is specifically applied in the United States to the doctrines of those New England Congregational churches that became Unitarian under the leadership of Channing and others early in the 19th century, and to their present representatives. The more conservative of these accept the Bible and the divinity (as distinguished from deity) of Christ, while the more radical are rationalistic, and some hold merely a form of deism. See quotation under UNITARIAN, *a*.

Unitarianism is the liberal wing of the great Congregational body which founded the first colonies in New England and gave the law to Church and State for more than two hundred years. J H ALLEN *Liberal Movement in Theology* p 33 [in Bros 1892]

In archaic use, expressing progress or approximation in

time as, the hour comes fast upon. The use of upon in these senses is less frequent than formerly and becoming archaic. See note under UPON, prep.

Upon often used for on in such phrases as "call upon," "whether meaning visit or summon and speak (or write) upon." The reasonable tendency now is to use the simpler (word on) whenever the idea of superposition is not involved. FRANK H. VIZETELLY *A Desk-Book of Errors in English* p 221 [f & w '02]

< AS upon, < up, < on, on >  
upon, prep. (1) On, in an elevated position; as, upon the throne, upon a mountain. (2) On, by motion upward, as, to get upon a roof. Upon now differs little in use from on, the former being sometimes used for reasons of euphony or rhythm and also preferably when motion into position is involved, the latter when merely rest or support is to be indicated. See SUP. When upon has its original meaning of up and on, that is, by means of ascent into a relation of support, it is written as two words, up having its adverbial force as, let us go up on the roof.

The vertebral column of the gorilla differs from that of man in its curvature and other characters as also does the conformation of its narrow pelvis. D. Wilson *Anthropology* p 3 [Lucas 1885]

2. Having vertebrae, vertebrate

—vertebral aponeurosis, a fascia covering the muscles of the back in the thoracic region, extending from the vertebrae to the angles of the ribs. —artery, a large branch of the subclavian artery, that passes up along the spinal column and supplies the brain. See *ARTERY*. —v. canal, the spinal canal —v. carles, ulceration of a vertebra or of several vertebrae —v. column, the spinal column —v. foramen, the large opening in a vertebra enclosed by its body, pedicles, and lamina —v. groove, one of the two deep furrows on the back one on each side of the spine —v. plate 1. Embryol. The part of the mesoblast near the notochord forming the primitive segments in *Crustacea* 2. Zool. A mid-dorsal plate (of a turtle) —v. plexus, a network of nerves about the vertebral artery —v. rib, a rib attached to the vertebrae only. —v. vein (Anat.) A vein arising in the occipital region, flowing into the innominate vein, and joined near its terminus by the anterior vertebral and posterior vertebral branches —*ver'te-bral*, *n* 1. A vertebral artery or vein 2. [Rare] A vertebrate —*ver'te-bral-ly*, *adv*

**Ver'te-brat'a**, 1 *ver'te-brat'a*, 2 *ver'te-brat'a*, *n* pl Zool. A division of the animal kingdom, variously ranked and limited (1) A subbranch of chordate metazoans having a longitudinal nervous cord ending in an anterior brain, protected by a sheath or axial skeleton, and separated by it from the visceral cavity. Including *Marsipobranchii*, *Elasmobranchii*, *Pisces*, *Amphibia*, *Reptilia*, *Aves*, and *Mammalia* and often also the *Lepidocardi* (2) The *Chordata*, including in addition to the above the *Cephalopoda*, *the Urochorda*, and the *Hemichorda*. See *ZOOLOGICAL* [*L. vertebatus*, isolated, *vertebra* see *VENTER*]

**ver'te-brate**, 1 *ver'te-brat*, 2 *ver'te-brat*, *vt* —*brat* *EP* —*brating* [*Rare*] To cause to be vertebrate or back-boned, figuratively, to endow with stamina or vigor

**ver'te-brate**, 1 *ver'te-brat*, 2 *ver'te-brat*, *a* 1. Having a back-bone or spinal column, as mammals, birds, reptiles, amphibians, and fishes, more widely, having a notochord, temporary or persistent 2. Of or pertaining to the *Vertebrata* 3. Having vertebrae or axial ossicles resembling vertebrae, as the arms of a starfish 4. Bot. Contracted at intervals, like the spine of an animal 5. [Rare] Vertebral [*L. vertebatus*, see *VENTER*]

**ver'te-brate**, *n* A vertebrate animal, one of the *Vertebrata*, popularly, an animal with a back-bone

**ver'te-brat'ed**, 1 *ver'te-brat'ed*, 2 *ver'te-brat'ed*, *o* Having vertebrae

**ver'te-brat'ion**, 1 *ver'te-brat'ion*, 2 *ver'te-brat'ion*, *n* The formation of vertebrae

**ver'te-hrek-to-my**, 1 *ver'te-hrek-to-my*, 2 *ver'te-hrek-to-my*, *n* Removal of part of a vertebra by cutting

**ver'te-bro-**, 1 *ver'te-bro-*, 2 *ver'te-bro-* From Latin *vertebra* (see *VENTER*) A combining form —*ver'te-bro-art'ic-al*, *a* Vertebral —*ver'te-bro-bas'lar*, *a* Connecting a vertebra and the base of the skull —*ver'te-bro-chon'dral*, *a* Connecting a vertebra with a costal cartilage, as, a *vertebrochondral rib* —*ver'te-bro-cos'tal*, *a* Connecting a vertebra with a rib as *vertebrocostal ligaments* —*ver'te-bro-di-dym'al*, *a* *Terat* A double monstrosity in which the union of the two trunks is by the vertebrae —*ver'te-bro-il-lac*, *a* Connecting the vertebral column with the ilium as, *vertebral ligaments* —*ver'te-bro-lar*, *n* pl Zool. The *Vertebrata* —*ver'te-bro-sac'ral*, *a* Of or pertaining to the sacrum and the spinal column above it as the *vertebro-sacral angle* —*ver'te-bro-sternal*, *a* Of, pertaining to or connected with the vertebrae and the sternum, as, *vertebrosternal ribs*

**ver'ted**, 1 *ver'ted*, 2 *ver'ted*, *a* Her. Flipped, relieved

**ver'tex**, 1 *ver'tex*, 2 *ver'tex*, *n* [*TEX*-es, *ti*-ces, 1 *ti*-sz, 2 *ti*-sz, *pl*] The highest point or summit of anything, as a hill, apex, top. Specif. (1) *Math* The extreme point of a figure in a certain direction, especially, in a triangle, the point of intersection of the sides — See *PHRASES* (2) *Astron* (a) The highest point of a celestial body, having a disk, the point where the vertical plane intersects the disk of a planet (b) The zenith (3) *Anat* The top of the head top of the arch of the skull See *CRANIOMETRY* [*L. < cetero tura*] SYN. see *SUMMIT* —vertex of a cone, pyramid, etc., the point of intersection of the generating lines or bounding planes respectively —v. of a cone, the point of intersection of the curve with its transverse axis —v. of a plane angle, the point of intersection of the sides —v. of a solid figure, a point where three or more planes intersect

**ver'ti-cal**, 1 *ver'ti-cal*, 2 *ver'ti-cal*, *a* 1. Occupying a position directly above or under, or place, placed at or connected with the vertex, being at the highest point, in astronomy, situated at or passing through the zenith

2. Lying or directed perpendicularly to the plane of the horizon, plumb, upright, as, a vertical line or plane

Some of the trees had exerted all their force in a vertical direction and rose straight tall and mastlike without lateral branches

—*ver'ti-cal-ly*, *adv* [*L. 1871*]

3. *Anat* & *Zool* Of or pertaining to the vertex of the head 4. Bot. (1) Perpendicular to the horizon or to the surface or to the axis of support (2) In the direction of the axis of growth, lengthwise [*F. < L. ver'tice*] —see *VENTEX* 1. *ver'ti-cal* [*Rare*] —*ver'ti-cal-ly*, *adv* 1. *Occid* Either pair of opposite angles made by two intersecting lines 2. *Astron* Angles as measured on a vertical circle above or below the horizon that is respectively angles of altitude or elevation or of depression —v. angles, angles attached to the top of the filaments and pointing upward —v. hollow, an upright tubular hollow —v. circle

See *CIRCLE* 2. *Astron* A great circle of the celestial sphere passing through the zenith and perpendicular to the horizon —v. composition, a composition that aims at the harmony of chords as distinguished from *horizontal composition*, which aims at the melody of separate parts —v. diplopia (*Pathol*), diplopia in which one image appears above the other —v. equation (*Math*) the equation of a conic section referred to one of its vertices as origin of coordinates —v. fins, the fins situated on the median line of the body, the dorsal and caudal fins —v. force or intensity, the vertical component of the earth's magnetic force at any point —v. index, see *CALCULOMETER* —v. leaf, a leaf whose opposite margins are in the same vertical plane, as in the compass-plant and some eucalypts —v. limb, a graduated arc or a theodolite, or other instrument for measuring vertical angles —v. line, a line perpendicular to the horizon or to another plane or plane for a base —v. plane 1. A plane passing through the zenith and perpendicular to the horizon 2. A plane passing through the axis and the vertex of a quadric surface 3

*Perspective* A plane passing through the eye perpendicular to the horizontal and perspective planes. See *PERSPECTIVE* 1. saw. 1. A circular saw having a horizontal axis 2. (Slang, Southern U S) An outrageous practical joke —v. slur (*Mus*), the *trapezoid* sign —v. structure, same as *VERTICAL COMPOSITION*

**ver'ti-cal**, *n* 1. *Math* A vertical line, plane, or circle Compare *ARC* 2. *Vertical* 2. [Rare] The zenith —angle of the vertical, the difference between the geocentric latitude and the astronomical latitude of a place about 11' at middle latitude

**ver'ti-cal-ly**, 1 *ver'ti-cal-ly*, 2 *ver'ti-cal-ly*, *adv* The character or state of being vertical —*ver'ti-cal-ness*, *n*

**ver'ti-cal-ly**, 1 *ver'ti-cal-ly*, 2 *ver'ti-cal-ly*, *adv* In a right line with the zenith, in a vertical direction

**ver'ti-cel**, 1 *ver'ti-cel*, 2 *ver'ti-cel*, *n* Plural of *ver'tex*

**ver'ti-cel**, 1 *ver'ti-cel*, 2 *ver'ti-cel*, *n* Bot & Zool A set of organs, as leaves or tentacles, disposed in a circle around an axis, whorl [*L. verticillus*, whirl of a spindle, *cetero*, turn] —*ver'ti-cel-ly*, *adv* 1. *ver'ti-cel-ly*, *adv* 2. *ver'ti-cel-ly*, *adv* 3. *ver'ti-cel-ly*, *adv* 4. *ver'ti-cel-ly*, *adv* 5. *ver'ti-cel-ly*, *adv* 6. *ver'ti-cel-ly*, *adv* 7. Altho in the United States veto is applied as a common term to the constitutional power of the President to refuse his assent to an act of Congress, the word itself is unknown to the Constitution A vetoed bill may be passed by a two-thirds vote of each house of Congress The same or similar withholding the President's veto The same or similar power is conferred on the executive in the Constitutions of most of the States, also on the mayors of some cities, but in some cases only a simple majority is necessary to pass a bill over the veto In England the sovereign's veto of an act of Parliament is absolute but the prerogative has not been exercised since 1692 and may now be considered obsolete In France the President has the right to refer back bills for further consideration, and in Germany the Emperor, as King of Prussia, has the right of veto against bills and decisions of the federal council In other representative governments of Europe the executive veto power exists in forms more or less qualified by constitutional limitations Both the term and the right are commonly traced back to the power vested in the tribunes of the people in ancient Rome to nullify any senatorial or other measures which they deemed injurious to their order or to the welfare of the people, which is said sometimes to have been done by pronouncing the word veto 1 Forbid

Vetoes are named according to their qualifications as, absolute veto (which destroys a bill wholly), limited or qualified veto (which is final except against a vote of an extraordinary majority of the legislature as in the case of a veto by the President of the United States), and suspensive or suspensory v. (which suspends but does not necessarily defeat or forbid the completion of a legislative measure) The right to reject certain parts of a bill and assent to the rest is called veto in detail

1. A stemless violet (*Viola odorata*). 2. A leafy-stemmed species (*Viola striata*). 3. A leaf of *V. lanceolata*. 4. A leaf of *V. sagittata*. 5. A leaf of *V. palmata*. 6. Fruit of a pansy (*V. tricolor*).

Violets are found in most parts of the globe there being about 100 species in all, of which 60 are in the temperate regions 30 in South America, 20 in South or East Africa, and 8 in Australia and New Zealand. The species in the United States and Great Britain are usually low herbs either stemless, as the common blue violet and the bird's-foot v. of the United States, and the sweet v. of England, or with short leafy stems, as the Canada v. and the dog v.

Many of the violets are blue, as the typical violet of literature, and many are fragrant, but others are of all shades from purple to yellow and white, and most of them are scentless.

The violet is cultivated on a large scale in the United States and in France, especially on the French Riviera. As a flower it ranks third in commercial importance in the United States. From *Viola odorata*, a type indigenous to Europe and Asia, especially Japan, many varieties have been derived and cultivated. Among the double-flower types are (1) the Fargnhar violet, Imperial v., King of Violets v., Madame Fichet-Nardy v., Marie Louise v., and the New York v., all with dark blue flowers. (2) The De Parme v., Lady Hume Campbell v., Neapolitan v., and Wilson v., all with light-blue flowers. (3) The Belle de Chanteny v., Queen of Violets v., and Swanley White v., all with white flowers. (4) The red or pink.

Among the single-flower types are (1) the California violet, La France v., Luxonne v., and Princesse de Galles v., all with purple flowers. (2) Rawson's White v., and the White Czar v., with white and single red or pink flowers. Among French varieties not included above are the Czar v., with long blue flowers. Madame Schwartz, with large violet flowers and the Souvenir de Madame Josse v., with large reddish-purple flowers with white center. See also below.

2. A color or class of colors seen at the end of the spectrum, opposite the red, beyond the blue the color-sensation caused by light of the wavelengths extending from 415 (more especially from 405) micron to the limit of the ordinary visible spectrum, also, a pigment of this color

**Vor'ph'-si**, 1 vor'ph'-si, 2 vor'ph'-si, n [*Bib Num xlii, 14*] Vor, 1 vor 2 vor, n *Norse Myth* The goddess of betrothal and marriage, who punishes those who are false.

**vor-ra'-clous**, 1 vor-ré-shus, 2 vor-ré-shus, a 1. Eating with greediness or in very large quantities, ravenous, as, a voracious person. 2. Eager to devour, very hungry; as, a voracious appetite; also, rapacious. 3. Ready to swallow up or engulf [*< L vorox (vorac-), < voro, devour*] *Syn.* See GREEDY - vor-ra'-clous-ly, adv - vor-ra'-clous-ness, n vor-ra'-cl-ty.

**vor-ra'-got**, n A whirlpool, an abyss - vor-ra'-got-ly, adv - vor-ra'-got-ness, n vor-ra'-got-ly, adv

**vor-rant**, 1 vor-rant 2 vor-rant, a *Her* Devouring said of animals depicted in the net of swallowing something. See *vor-rant* under *vor-rant* [*< L vorant (v-r), ppr of voro, devour*].

**Vor'ar'-ber**, 1 vor'ar'-ber, 2 vor'ar'-ber, n [*< Afr D*] A province of W Tyrol, Austria, 1,003 sq m, capital, Bregenz.

**vor-ras**, 1 vor-ras, 2 vor-ras, n [*< Sp Am*] A lutulent fish (*Aprion macrophthalmus*) of the West Indies, a snapper.

**Vor'hand**, 1 vor'hant, 2 vor'hant, n [*< Card-playing*] In skat, the player on the dealer's left. To the left of Vorhand is Mitthand. The third player is Hinterhand.

**Vor-ro'-nch**, 1 vor-ro'-nch, 2 vor-ro'-nch, n 1. A government in European Russia, area 26,443 sq m. 2. Its capital.

**Vor-ro'-marty**, 1 vor-rúsh-mart-ya, 2 vor-rúsh-mart-ya, n [*< Hb*] A Hungarian poet.

**vor-ous**, *suffix* A termination signifying eating, feeding upon, subsisting on. Compare -PHAGOUS [*< L voro, devour*].

**vor'spel**, 1 vor'spel, 2 vor'spel, n [*< G*] *Mus* A prelude.

**vor'stel'ing**, 1 vor'stel'ing, 2 vor'stel'ing, n [*< G*] *Philos* In Kantian use, n representation, an intuitional or a sensational perception, or a conception that generalizes such perceptions.

**vor'tex**, 1 vor'teks, 2 vor'teks, n [*< ORT-CES*, 1 vor't-siz, 2 vor't-siz, or vor'tex-es, pl] 1. A mass of rotating or whirling fluid, especially when such spirally toward the center, a whirlpool. 2. *Physics* A portion of fluid whose particles have rotary motion, in which in a fluid the fluid does not rotate in mass as a solid body, but has unequal angular velocities at different points. In vortices seen in nature, the axis of the vortex is usually a closed curve, as in the smoke-rings puffed from a locomotive, a cannon-mouth, or a smoker's lips. These circular vortices or vortex-rings move forward parallel to the same plane, the parts rotating about the circular core but the ring not rotating about its axis. If two circular vortices approach each other, one expands, rotates more slowly and the other contracts, rotates more rapidly, and passes through the center of the larger ring without touching it. In a perfect fluid a vortex could not be formed by mechanical means, but if it existed it would be indestructible whatever changes of shape it passed through. See *VORTEX-ATOM*.

**vor'tex theory**, 1 vor'teks-theory, 2 vor'teks-theory, n [*< ORT-CES*, 1 vor't-siz, 2 vor't-siz, or vor'tex-es, pl] A new epoch in the progress of hydrodynamics was created in 1859 by Helmholtz who worked out remarkable properties of rotational motion in a homogeneous incompressible fluid devoid of viscosity. He showed that the vortex filaments in such a medium may possess any number of knottings and twistings but are either endless or the ends are in the free surface of the medium they are indivisible. These results suggested to Sir William Thomson the possibility of founding on them a new form of the atomic theory, according to which every atom is a vortex ring, a non-rotational ether and as such must be absolutely permanent in substance and duration.

The letters a, e, i, o, u were originally devised and intended to represent the vowels in the present Latin alphabet, and, respectively, and they still have these values constantly or provisionally, in most of the other languages which employ them. Our written vowels have from three to nine values each, and they are supplemented in use by a host of diphthongs of equally variable pronunciation. W. D. Whitney *Long and Study of Sanskrit*, 4th ed., p. 64, 1887.

[*< F. voyelle, < L. vocalis, see vocal, n*]

**vowel**, a vowel pronounced with a contraction of the opening of the mouth or lips (as *v*, *u*, *o*, *a*), a vowel which can not form a syllable by itself. [*< L. v, u, o, a, the first four of which are vowels, a peculiarity of the Ural-Altaic group of languages according to which a heavy or guttural vowel (o, o, u) in a root must be followed by the same sort of vowel in the suffix, and a light or palatal vowel (e, i, ä) in the root must be followed by a light vowel in the suffix. Every suffix has two forms, a light and a heavy, used as circumstances require. vowel-i-lia'-m-n-yt, -hidden v. (Lat. Grom), a vowel with hidden quantity; -mildio v., in a polysyllable word, a vowel between the stem and the final syllable; -mildio v., a vowel the articulation of which requires a long tongue with neither front nor back articulation predominating - natural v., an easily and instinctively uttered vowel, such as a neutral or mixed vowel - neutral v., the sound of the u in tub, turn, burn, son, which is especially found in unaccented syllables and is an obscure form of some more distinct vowel. The letter e often has this pronunciation - round v., a vowel the utterance of which requires rounded lips - vowel-i-lia'-m-n-yt, a gas flame sensitively indicating by its rise and fall change in the pitch of vowels pronounced near it - v. gradation, n. Philol. The change of vowel upon which the classification of strong verbs is based, as, drink, drank, drunk, obliat as distinguished from umliat. Abuhit is an effect of accent, umliat of assimilation. Anglo-Saxon roots in a have three different systems of accent, whence three ablaut conjugations, roots in f and in u have each but one, so that there are five ablaut conjugations. Verbs are, however, modified by various umlauts and grammarians often distinguish conjugations by them, and enumerate from six to twenty of them - v. mutation, n. Philol. Same as UMLAUT - v. point, n. One of a system of diacritical marks written in connection with consonants in Hebrew and certain other Oriental languages to indicate the vowel-sound to be given with such consonant - v. system, the vowels of a language or dialect taken together as constituting a phonetic system - vowel-ism, n. [Rare] The use of vowels - vowel-ist, n. One who makes much use of vowels - vowel-ize, v. To supply with vowel-points or -signs, as, to *vowelize* shorthand, to *vowelize* the Hebrew text - vowel-less, a. Having no vowels - vowel-less, a. Having no vowels - vowel-like, a - vowel-like, a. Having a large number of vowels.*

Roman Black Letter Script  
**W, w, 1** duh'l-yū, 2 duh'l-yū, n [w's, W's, or W's, 1 duh'l-yū, 2 duh'l-yū, pl] 1. A letter the twenty-third in the English alphabet

In uttering its sound, as in *wit*, the vocal cords are set in vibration with the lips in position for the oo of *pool*, but without the formation of the resonance-chamber necessary for a distinct, full-fledged vowel The sound is thus really a 'half o', instead of a "double yu", whence the name 'lähli semi vowel', of Fr *ouest*, Eng *west* W stands in the same relation to o as y to i

If the lip-movement of w is made without vibration of the vocal cords, the result is a voiceless or "whispered" w This is the sound usually substituted by Englishmen for the initial wh of *white* when etc, which in the United States is generally pronounced *hw* The voiceless w occurs also in other words after voiceless consonants as in *quart sweet, twin*

The modern English w is almost all come from Anglo-Saxon, the sound occurs also with the u of some words from Latin and French, and the o of French words in *ouart, suavity, reservoir* See under Q

The w sound has appeared freely and passed away strikingly in the Indo-European tongues No record of the Greek *u* or digamma, so well known to philologists is found in the manuscripts of literature The w of Latin was

written with the same letter as the vowel u, o In the second century A D it changed into the spirant v, and so continues through the Romance tongues Anglo-Saxon preserves the original sound, but many words have now lost it (1) Initial before r, as in *write, wrong*, before i, as in *with, wisp*, (2) medial sometimes in *thru, tw, sw*, as in *throng, < AS thwarg, tw, = th, answer, sword* (3) final w has changed to its vowel or dropped in sound entirely, *few = fū, spearow = sparrow, treow = tree* The French could not pronounce German w easily, but substituted *gu, v, u, ou, guerre (war), guarder (guard)* There was confusion about h and u, the AS *hw* was inverted as *hu* > *what*, and silent w was written by blunder as *whole* for *hole* W easily changing to u, and, combining freely with other letters, is concerned in many phonetic changes, especially in classic Latin, such as *v, > u* in *solte, solution*, and *tea, ata, > ws, 6*, in English *was, saw*

The w s average 2 31 per cent of the sounds on this pages of English literature, according to Professor Whitney's examination W D WHITNEY *Oriental and Linguistic Studies* second series p 274 [E 1874]

W is a ligature of VV For earlier history of V, see its vocabulary place V, then the sound of the vowel u, came into use, single and double, in English or consonant u = w, through Anglo-Norman influence, 1150-1200

The 's are at first written separate or sometimes ligatured, Wy The earliest Anglo-Saxon, like Old High German, makes the same use of u, v, uu, vv, vu

But from the ninth century to 1280 a special Anglo-Saxon character was used, þ, < runic þ, wén, hope, and wun, joy, the eighth letter of the futhorc, < early Greek V

The two u's or v's were naturally spoken of as "double u" and u as "single u," and altho *wt, we*, and *wau* were early proposed as names for the new ligature, no phonetic name has gained currency The French call it *double e*, the Germans *ue* For further details, see F, U, V, Y

war, n. 1. A contest, as between nations or states, or between different parties in the same state, carried on by force and with arms, commonly either for defense, for avenging insults and redressing wrongs, for the extension of commerce and acquisition of territory, or to obtain and establish the superiority and dominion of one of the belligerents over the other, also, the condition of things created by such a contest.

War is usually prosecuted by the slaughter or capture of troops and the seizure or destruction of ships, towns, and property. Among savage nations it is often waged merely for purposes of plunder. When the contest is between nations or states it is termed international or public war, and is always under warrant and by authority of the sovereign power of each belligerent. War carried on between parties under the same government is civil war; when prosecuted in the territory of the antagonist, aggressive or offensive war; and when carried on to resist attack, defensive war. In the United States, by article 1, sec. viii of 1. Congress is empowered 'To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water.' In Great Britain war is declared by the ministry and proclaimed by the king.

2. The science or art of military operations, strategy 3. Any act or state of hostility, enmity, strife, also, an earnest conflict; a contest 4. A considerable erosion of earth by the action of water, as by a torrent or flooding rain, also, the excavation made by such action, said especially of earthen embankments, as for a railway or a river-levee. 2. A cleansing by washing out—wash'out-plug, *n*. A valve in a container to permit the escape of cleansing water—w. process, see *GLASS* process under *GLASS*.

Wash'tail, 1 wash'tail, 2 wash'tail, *n*. [*Prov Eng*] The Wash'te-naw, 1 wash'te-nä, 2 wash'te-nä, *n*. A county in S Michigan, 690 sq m, county-seat, Ann Arbor.

Wash't, 1 wash't, 2 wash't, *a*. [*WASH'-ER*, *WASH'-EST*] 1. Too much diluted, watery, moist, soft, weak, hence, wanting in substance, solidity, stimmung, or force, feeble.

And on the washy ooze deep channels wore. MITCHELL, *P. L. bk. vi. 1* 303.

2. [*Local, U. S.*] Not firm or hardy, apt to break copiously, as, a washy horse. [*< WASH*]

Wash's, 1 wash's, 2 wash's, *n*. *Moham Lar*. A person appointed in a will as manager of a devised estate. [*Ar. waqf*]

Wash'-all-kow, *n*. Same as *VASIKOR*.

Wash'-ite, 1 wash'it, 2 wash'it, *n*. *Mineral*. An altered variety of silicate. [*< WASHIT*]

Wash'-um, 1 wash'-or-shi-um, 2 wash'-or-shi-um, *n*. *Chem*. A gray metallic element described by J. F. Bahr in 1862 as existing in the mineral waste, but later shown to be identical with thorium. [*< Gustavus Vasa or Wassa*]

Wasmes, 1 vām; 2 vām, *n*. A town in Hainaut Belgium.

Wasp, 1 wasp; 2 wasp, *n*. 1. A predatory dipterous stinging hymenopterous insect. The typical social wasps or vespids construct papery nests of masticated vegetable material. They feed on the sweets of flowers and fruits, and on insects, killing the latter with their jaws.

watch'word', 1 wach'wōrd', 2 wach'wōrd', n S S

A secret word or expression given on demand of a sentry and showing a person's right to pass, a password used to distinguish friends from enemies, countersign.

2. A word or phrase summoning to concert of action, a rallying cry or maxim.

The names of Clarkson and Wilberforce will, in the end of time, be watchwords in the mouths of the friends of bleeding humanity.

W. L. GARRISON *Writings and Speeches*, Clarkson and Wilberforce p. 174 [a r w 1882]

34. A watchman's or sentry's call.

4. A signal or warning to act or be on one's guard—to set a watchword upon, to make a byword of.

Wa'teau', n Same as WATTEAU.

Wa'ter', 1 wōt'r, 2 wāt'r, n 1. Claude Henri (1718-1780), a French artist, writer, and academician.

2. Louis Etienne (1780-1860), a French landscape-painter.

Wa'ter, 1 wōt'r, 2 wāt'r, v I. t. 1.

To pour water upon, to moisten or sprinkle with water, irrigate.

The Fellah opens or closes the rivulets with his foot as the Serpentina says, "Where thou wateredst the land with thy foot."

S. C. BARTLETT *From Egypt to Palestine* p. 45 [a r 1879]

2. To provide with water for drinking, give water to, as, to water cattle.

3. To increase the amount or bulk of by adding water, mix or dilute with water, weaken by dilution with water, as, watered milk.

4. To give an undulating sheen to the surface of by subjecting to uneven pressure after moistening and heating, as silk,

linen, etc.

5. To supply with streams used in the passive participle.

No country in the world is so well watered [as South America].

HOLLIS READ *Hand of God in Hist* vol. u p. 320 [a r 1860]

6. Com & Finance To enlarge the number of shares of without a proportionate increase of paid-in capital, as, to water railroad or telegraph stock.

II. 1. To secrete, become filled with, or discharge water, as, her eyes watered.

2. To fill with saliva, as the mouth, from desire for food, hence, to have a longing, as for something palatable, as, their mouths watered at the thought of such dainties.

3. To get and take in water, as for drinking or for a boiler, as, the engine watered.

4. To drink water and of beasts [*< AS wætran, < water, water*].

wa'ter, n 1. A colorless limpid liquid compound of hydrogen and oxygen (H<sub>2</sub>O) in the proportion of two volumes of hydrogen to one of oxygen, or by weight of 2 parts of hydrogen to 16 of oxygen.

Pure water is neither alkaline nor acid, and is free from odor and taste.

It is blue when viewed in mass, but water of other colors caused by foreign matters, organic or inorganic, is not of uncommon occurrence, even water that is white as milk or black as ink is known.

It becomes solid—freezes—at 32° Fahr., forming ice, and at 212° Fahr. it becomes gaseous, forming steam at the normal pressure of the air.

Its greatest or maximum density is at 39.2° Fahr., which is called unity (1,000) and is the standard for the comparison of the densities of other solids and liquids.

A cubic centimeter of water at 39.2° Fahr. weighs 1 gram and is the standard unit of the metric system.

It is an imperfect conductor of electricity, and is slightly compressible.

The solvent powers of water are very great, and it is seldom found pure.

Among geological agencies it is first both as regards its mechanical and chemical action.

It is the chief agency in rock-making, in shaping mountains, excavating valleys, and in recording the progress of the earth in its features and life.

Its mechanical action manifests itself by softening rocks and earthy beds by penetrating and causing disintegration through alternate freezing and melting, while its chemical action manifests itself by its solvent power, yielding new minerals while altering others.

Water forms more than two-thirds of the earth's surface, and it has been estimated that if all the water of the globe could be collected it would form a sphere 900 miles in diameter.

According to its source, it is known as river-water, sea-water, spring-water, etc.

When precipitated from the clouds it is rain-water. Rain-water is nearly pure.

An average analysis of sea-water would show about 3.5 per cent salts of various kinds, 2.7 per cent being common salt.

Water is also an essential

Parts of an American Open-face Watch

I View of pillar-plate with top-plate removed, main-wheel broken away to show mainspring balance-wheel with arms broken out to show hair-spring also winding- and setting-mechanism. II View of back side of pillar-plate showing winding-pinion and clutch, intermediate hand setting-wheel, etc. III View showing barrel-bridge train-bridge, and escape-wheel bridge (which together constitute the top-plate) winding-wheel, balance-cock micrometer regulator, etc. IV View showing a section through a portion of the pillar-plate and barrel section of top-plate which carry the winding-bar, crown-wheel, etc. V View showing section through top-plate, pillar-plate, and balance-cock showing the watch-train stretched out in a straight line in its relative order of movement beginning on the left with the main-wheel which revolves once in six and one-half hours and drives the center-wheel one revolution each hour and through the cannon-pinion the minute-wheel, the minute-pinion and the hour-wheel drives the latter one revolution in twelve hours the center-wheel drives the third wheel and pinion and they in turn drive the fourth wheel and pinion one revolution each minute, and through the action of the escape-wheel and the pallet and fork the balance is given 18,000 vibrations per hour.

In operating turn winding-arbor (66) by means of a male square on winding-bar in stem of case entering square hole in outer end of winding-arbor (66) impinging end of push-pin (74), forcing it inward against shupper-lever (68), which acting against shupper (69) engages ratchet-teeth of shifting-clutch (65) with corresponding teeth on winding-pinion whose spiral teeth engage corresponding teeth of the crown-wheel (8), whose peripheral teeth are in engagement with corresponding teeth of winding-wheel (11) which is attached to the upper end of the barrel-arbor (16) the lower end of which arbor is attached to mainspring-harrel (19), to which the outer end of mainspring is attached. Turning this harrel, consequently winds mainspring closely around the main-wheel hub (14). The recoil-click (79) prevents the mainspring being too tightly wound. The force of the mainspring causes the main-wheel (13) to turn and it being connected with teeth of center-pinion (23), carries that and its attached center-wheel (22), and in similar manner the succeeding 3d, 4th and escape-wheels and pinions. When the watch is at rest one of the pallet-jewels (39) should rest on the inclined face of one of the teeth of the escape-wheel (35). The turning of this wheel causes pallet (37) to swing on its arbor (38). The extended arm of the pallet terminates in a fork (41) which in moving carries enclosed roller-jewel (45) and roller (44) which being fast on balance-staff (49), carries balance (47) giving it a slight impetus and in so doing deflects hair-spring (52) until its resistance exactly equals the impetus of the balance (47). The spring then reacts carrying balance in opposite direction until roller-jewel reenters the fork and moves it sufficiently to unlock the escape-wheel. The swinging of the pallet brings one of the pallet-jewels directly in front of one of the escape-wheel teeth, thereby arresting its further progress. The return movement of balance swings the fork in the other direction and thereby unlocks the escape-wheel tooth whose inclined top again forces the pallet and fork in contrary direction until the opposite pallet-jewel has engaged another tooth, these reverse movements of the balance serving to disengage successively one or the other of the teeth of the escape-wheel. The weight of the balance and the elastic force of the hair-spring must be so adapted the one to the other, as to produce eighteen thousand vibrations of the balance per hour. On the center staff is located a cannon-pinion (24) so-called which engages with the minute-wheel (26) which is made fast to minute-pinion (27) which engages the hour-wheel (25) the relation of the wheels and pinions being such that while the cannon-pinion makes one revolution per hour the hour-wheel makes one revolution in twelve hours. For setting the hands it is useful to disengage the shifting-clutch sleeve (64) from the winding-pinion (67) and bring the teeth of the opposite end of sleeve into engagement with the corresponding teeth of the intermediate setting-wheel which are constantly engaged with the teeth of the minute-wheel, and to effect this shifting of the sleeve it is simply needful to pull outward the crown of the watch case thus withdrawing the winding-bar from contact with the push-pin, when the action of shupper-spring (72) acting upon the shupper and shupper-lever (68-69) will throw the shifting-clutch into engagement with the intermediate setting-wheel.

constituent of all animal and vegetable life, and of most minerals and rocks, forming the so-called water of crystallization (See phrase). It frequently imparts crystalline form and color to salts, as in the case of cobalt, copper, iron, and other sulfates.

Water forms a large proportion of all animal organisms and in this river of life the various constant vital functions constantly develop chemical, electrical, mechanical, and heat energy.

WILLIAM L. SHERRWOOD *Nature of Life* Lecture before N. Y. University, Jan. 20, '05

2. Any particular body of water, as a lake, a river, or a sea sometimes used in the plural, as, the waters of Lake Superior, to go by water, in Scotland, a small river. 3. Any one of the aqueous or liquid secretions of animals, as, water on the brain, also, perspiration, tears, urine, also. 4. Any preparation of water holding a gaseous or volatile substance in solution, as, ammonia water, orange-flower water, also, a product of distillation or alcoholic solution, as, strong water, Cologne water.

They include the preparations formerly specially designated as 'Distilled Waters' having been made by distilling water from plants or parts of plants containing volatile oil.

U. S. Dispensary p. 216 (c. 1890)

5. The transparency or luster of a precious stone or pearl, because, the aggregate of qualities that make it valuable, also, figuratively, excellence, purity, degree, etc. 6. An undulating sheen given to certain textile fabrics, or to metal. See DAMASK, 2, DAMASKED, 2, (6). 7. Finance. Stock issued without increase of paid-in capital to represent it. 8. [Prov. Brit.] The banks of a river or other body of water, also, a seaside resort. 9. [Prov. Eng.] Dew. [AS *water*, water]

—above water, out of danger, secure —alkaline w, a natural mineral water in which alkaline salts, especially sodium bicarbonate and sodium chloride, predominate, as the Congress water of Saratoga Springs and the Vichy water of France. Beneficial of the waters (Gr. *Ch.*) a professional Epiphany ceremony of blessing streams, seas, and certain holy waters —between wind and w. 1. At that strip of a vessel's hull which in sailing is alternately submerged and above water. 2. In any particularly vulnerable part —bitter w., a natural mineral water containing in solution certain magnesium salts as magnesium sulfate —bottom water, n. Same as GROUND-WATER —bromine w, a solution of bromine in water used as a laboratory reagent —burning w, alcohol —carbonated w, artificially, any natural mineral water containing carbon-dioxide gas now, any water naturally or artificially impregnated with carbon dioxide, soda-water —chal. beate w., a natural saline mineral water containing ferrous salts, as the waters of Spa, Belgium, and Wiesbaden, Germany —deep w, or waters, a state or time of great tribulation, grievous peril —entrained w., water trapped in a steam-pipe —false waters (Obstet.), a fluid found sometimes between the amnion and the chorion —Florida w., a proprietary preparation used as a toilet-water —frightened w. [Naut. Slang] weak tea or coffee served to a crew —ground w., n. The water which permeates the outer portion of the earth's crust, filling pores, fissures, and cavities, and saturating the soil and rocks below an irregular, indefinite surface known as the water-table. See UNDERGROUND WATER —hard w, see HANA 12 —hepatic w., water charged with hydrogen sulfid or impregnated with sulfur —holy w., water regarded as sacred especially in Christian churches, that consecrated by a priest and used for lustral and ritual purposes —house of w. [Local Eng.] an abandoned mine-pit containing water —Hungary w., a preparation distilled from rosemary and similar flowers said to have been used by some former queen of Hungary as a toilet —lithium w., same as w. SALINE —lithia w., a natural mineral water containing lithium salts, valued for use in certain diseases as rheumatism —low w. 1. Low tide. 2. The lowest point on a river-bank exposed in any recorded stage of the water. 3. [Slang, U. S.] The condition of being out of money —marmala w., a perfume obtained from the flowers of the Bengali quince (*Azalea marmala*) —mineral w., a natural water coming from a spring and containing some characteristic mineral ingredient, as carbon dioxide or a lithium salt. Mineral waters are extensively used in medicine, and are described according to their ingredients. The phrase has also been largely applied to artificial waters made by dissolving the salts in pure water —of the first w., of the purest variety or finest quality said of certain precious stones, especially the diamond —on the w. wagon [Slang], abstaining from liquor —public waters, any waters, either still or flowing, in which the public have right of navigation —pulverized w., water diffused into fine spray —quicksilver w., same as quick-water —saline w., a natural mineral water in which saline salts, chiefly sodium chloride and calcium or magnesium sulfates, predominate, as the Saratoga waters of New York or the Selditz waters of Bohemia —sniff w., see snort, 12 —territorial waters (Internat. Law), the belt of sea under a state's territorial jurisdiction —the waters, the amniotic fluid —to cast oil on troubled waters, figuratively, to calm, appease from the well-known effect of a film of oil on turbulent water —to hang its (wing) to fall to work, said of a pump —to keep one's head above water, figuratively, to keep from succumbing to trouble or misfortune —to take w. 1. To fall in the wake of another boat, as in a race. 2. To dip one's head in water for a stroke, begin to row. 3. [Slang] To hack down weak —troubled waters, disturbed affairs, discord —underground w. (Geol.), this water which permeates in an unbroken sheet, the rock-masses of the earth, filling their pores and fissures, quarry-water. The upper soil-covered area is the boundary between this and the "ground-water," which is properly limited to the soil. It is called "underground water" when reference is made to it as a source of water-supply through the rock-fissures or "quarry-water" when reference is had to the effect which its presence or its absence, after drying, has on quarried stone —water-ader, n. 1. The water-moccasin. 2. The common water-snake (*Tropidonotus sipedon*) —w. agate, n. See AGATE —w. aggrimony, n. A British herb (*Bidens tripartita*) growing in watery places —w. aloes, n. Same as WATER-SOLDIER —w. analysis, n. The chemical analysis of a water, usually to determine its potability or value for drinking purposes, its medicinal value, as in the case of mineral water, or its adaptability for industrial purposes as in the case of a water suitable for steam-boilers —w. anchor, n. A sea-anchor. See ANCHOR —w. antelope, n. See CAMEL —w. apple, n. The custard-apple —w. arch, n. A cluster of pipes or a chamber filled with water constituting the arch of a furnace and used as a substitute for the fire-brick arch —w. arum, n. A low perennial herb (*Calla palustris*) growing in cold bogs in the northern United States and Canada. It has a creeping rootstock, cordate leaves, and an open white spathe about two inches long. See CAMEL —w. avens, n. A simple-stemmed herb (*Geum rivale*) of swamps and temperate regions with lyrate and interruptedly pinnate root-leaves, those of the stem 3-foliate or 3-lobed, and purplish-orange flowers

Compare AVENA —w. back, n. 1. A coil or chamber back of the fire-pot in a range or other stove, for heating water, and usually a part of a circulating system. 2. A brewery water-supply cistern —w. bailaget, n. A small toll, levied by the Corporation of London, on corn brought by vessels into the port —w. bailiff, n. [Eng.] 1. (1) An officer in port towns, appointed for the search of ships, examination of the fish brought in, and to see that the laws of the port are duly observed. (2) [Eng.] An official of the court of admiralty who has jurisdiction in maritime and naval matters, and is said to have jurisdiction in inland and over other maritime matters occurring within three leagues from the shore. 2. An officer who protects a river or other water from poachers or illegal uses —w. balance, n. An obsolete water-raising apparatus consisting of a swinging frame carrying a double series of troughs ascending in zigzag places, and so adjusted to each other that, as the frame rocks in either direction, water may be passed to a higher level —w. bar, n. 1. A ridge thrown across a steep country road, to turn surface-water. Compare THANK-YOU-MAN 2. [Eng.] A strip inserted in a joint to prevent the entrance of water, as between the wind and stone sills of a window —w. barrow, n. A wheelbarrow arranged with a small tank, for watering gardens, etc. —w. bath, n. An apparatus used variously, as in chemistry or cooking, for heating substances at constant temperature. It consists essentially of an inner receptacle separated from an outer one by a chamber filled with water, heated constantly so that the temperature never exceeds that of boiling water. Sometimes salts are added to raise the temperature —w. battery, n. 1. *Elec.* A voltaic battery in which the electrolyte is water. 2. *Fort.* A battery erected or stationed nearly on a level with the water —w. beadle, n. A water-bailiff —w. bean, n. Any plant of the genus *Nepenthes*, a *zelunda* —w. bear, n. To transport by water —w. bear, n. A bear-animalcule or tardigrade animal —w. bearer, n. 1. One who carries water, specie, one who supplies or acts water in places where there is no system of water-works. 2. [W.] *Astron.* Same as AQUARIUS —w. bearing, n. *Mach.* A journal-bearing in which water under pressure does the work of a lubricant, a palmer-glossant —w. beech, n. 1. The American hornbeam. See HORNBEAM 2. The American plane-tree or sycamore (*Platanus occidentalis*) —w. beetle, n. 1. A hydradephagus beetle, having legs flattened and fringed with hairs for swimming, as a dytiscid or diving beetle or a whirligig or gyrinus. See ILLUS 10. 2. Same other aquatic beetle, as the European black water-beetle, a hydrophilid (*Hydrophilus piceus*) —w. beche, n. [Local, U. S.] The bitter —w. bellows, n. A vessel having valves opening in opposite directions, and placed mouth downward in water. As it is raised, air is drawn in at one valve, and as it is lowered, air is forced out through the other valve —sometimes used in pairs to produce a continuous air-current —w. betony, n. A British species of figwort. See BETONY, 2 —w. bewitched [Slang], a weak or wacky mixture, as weak tea or grog —w. damaged, n. w. bird, n. A bird of aquatic habits —w. biscuit, n. A cracker or hard biscuit made of flour and water —w. blister, n. Same as WATER-HICKORY —w. blackbird, n. [Local, Brit.] The water-ouzel —w. blast, n. *Mfn.* A form of blower resembling the trompe —w. blubs, n. A disease characterized by serous vesicles scattered over the body, attended by fever, vesicular fever, bladder fever —w. blink, n. In the arctic regions, a cloud or spot on the horizon arising from and indicating the presence of open water —a sign of the breaking up of winter —w. blinks, n. Same as WATER-CRECKEN —w. blister, n. A slight elevation of the cuticle enclosing serous fluid, also, an analogous blister on the skin caused by heat or cold —w. block, n. *Metal.* A hollow metal block kept cool by water circulating inside it —w. blue, n. Soluble blue. See BLUE —w. boa, n. The anaconda —w. board, n. A board set up to windward in a boat, to keep off waves and spray —w. boat, n. A boat used to convey fresh-water supplies to ships —w. boatman, n. 1. A notonectid bug having a boat-shaped body and swimming upon its back with oar-like movements of the long ciliated hind legs, as *Notonecta undulata*, common in the United States body, back-swimmer. 2. A corioid bug, as the common American *Corixa interrupta* —w. bok, n. A water-buck —w. borne, n. 1. Carried upon the water borne by water, floated. 2. Transmitted by drinking water said of certain infectious diseases. 3. *Naval Arch.* The portion of a ship's body sustained by the water, as opposed to the overhang —w. bosh, n. *Metal.* A caaling trough for tools —w. bottle, n. 1. A bottle of glass, skin rubber, etc., made to contain water. 2. A device for collecting samples of water at specified depths —w. bottom, n. 1. A water case used to protect a floor, etc. from the heat under the ash-pit of a furnace, etc. 2. A ship arranged to carry water as ballast —w. buget, n. Same as BOUQUET 1 —w. bound, n. A braided rope, as a standard by water, as in the form of a storm freshet, etc. —w. box, n. A water-case attached to the outside of a furnace, to protect the iron from the effects of fire —w. brain, n. A disease of sheep characterized by staggering, as from giddiness due to the brain-form —w. brain fever, acute tubercular inflammation of the membranes of the brain, tending to stupor, stupor, or convulsions, Whytt's disease, internal hydrocephalus —w. brake, n. A brake formed by injecting a jet of water into a cylinder of a locomotive when the engine is running. By this means the engine acts as a brake not now in use —w. brash, n. An affection characterized by a burning sensation in the stomach, with eructations of acid —w. brain fever, n. *Vet. Med.* A malignant epizootic disease of sheep characterized by inflammation of the gastrointestinal tract and hemorrhages into the peritoneal cavity —w. break, n. 1. A little water ripple. 2. Same as WATER-BAR, 1 —w. breather, n. An animal that breathes water by means of gills —w. bridge, n. 1. A hollow bridge in a boiler, containing water, and used for wrapping pipes, but admitting the passage of flame above and below. Compare FIRE-BRIDGE, MIDFEATHER —water-bron, n. [Scot.] Water-grease —w. brose, n. [Scot.] Brose or potage

mado of water and meal —w. buck, n. A large African antelope of the genus *Kobus*, frequenting the neighborhood of water, especially, the *K. singapura* of West Africa, the very handsome *K. defassa* and *K. maria* of the Nile and Equatorial Africa, and the *K. lechwe* or lechwe and *K. elipsiprimum* of South Central Africa. These antelopes have coarse, uncuttable flesh, but are very handsome, with long lyrate horns. See ILLUS 1 preceding column —w. buekler, n. Same as WATER-SUEN —w. budget, n. A water-bouquet —w. buffalo, n. The Indian buffalo —w. bug, n. 1. The croton-bug. 2. An aquatic bug, as a large rapacious belostomid living below the surface of the water, or a Gerrid that runs over the surface of pools —w. bush, n. An Australian timber-tree (*Acrocorium viscosum*) —w. built, n. 1. A large open-headed cask or hoghead set up an end, for holding water. 2. A dyed cloth. 3. *Arch.* A receptacle for water, as a lavatory, fountain, or the like —w. buttercup, n. 1. The marsh-marigold (*Caltha palustris*) 2. Any aquatic plant of the genus *Ranunculus* —w. calamint, n. The corn-mint —w. caltrop, n. 1. Same as WATER-CHESTNUT 2. A pondweed (1) The closed-leaved (*Potamogeton densus*) (2) The curly-leaved (*Potamogeton crispus*) —w. can, n. [Prov. Eng.] Either of two European water-lilies, the yellow, pond-lily (*Nymphaea lutea*) or the white water-lily so called from the shape of the seed-capsule —w. cancer, n. Gangrenous ulcer at the mouth with abnormal flow of saliva —w. canker, n. w. cap, n. 1. *Ballistics.* A copper capping to enclose a time-fuse on an explosive projectile used to prevent a lighted fuse from being put out by water. 2. A South-American tanolopterion tyrant-flycatcher, as the black-and-white *Flurcula pica*, of the Argentinean pampas, water-eat —w. carpet, n. 1. [Eng.] A geometric moth (*Cidaria sylvatica*) 2. An American form of golden sedge (*Chrysosplenium americanum*) spreading like a carpet over the surface of springs. See GOLDEN —w. cart, n. 1. Transportation by water. 2. The carrying of water, as by aqueducts, pipes, etc. 3. [Rare] That which effects transportation by water, as vessels, boats, etc. —w. carrier, n. One who or that which carries water —w. cart, n. A cart for transporting water, especially, a water-lifting cart —w. cartidge, n. A malarial cartidge with a water-jacket around the chamber containing the explosive, for the purpose of lessening the danger of an explosion of gas in the mine —w. cask, n. A cask set apart for holding water, especially one in which drinking-water is carried on shipboard —w. censer, n. A doctor who diagnosed all diseases by casting or inspecting a patient's urine, by extension, a charlatan —w. cat, n. The Indian otter —w. cay, n. The capybara —w. cell, cell containing water, specie, one of the cells or cavities in the stomach of a camel for the storage of water —w. cement, n. Same as HYDRAULIC CEMENT —w. centipede, n. [Local, U. S.] The hellgrammite —w. chat, n. 1. A bird of aquatic habits or a water-bird. 2. A tanolopterion tyrant-flycatcher —w. check, n. A check-valve as in a pipe —w. chevron, n. A West-African chevron (*Dorchesterium aquaticum*) frequenting the banks of streams brown, striped and spotted with white, the water-deer, boomorah —w. chicken, n. The common American gallinule —w. chickweed, n. A small Old World aquatic herb (*Montia fontana*) of the purslane family —w. elcanda, n. A water-hoatman —w. clam, n. 1. An aquatic mollusk. 2. Any device, as a cypress, for measuring time by the fall or flow of water —w. cock, n. A large gallinule (*Gallinula cristata*) of Australia and the East Indies having the head of the male surmounted by a red horn-like caruncle in the breeding-season —w. collie, n. [Local, Eng.] The water-ouzel —w. colley, n. w. comparatar, n. An apparatus consisting principally of a water-reservoir whose temperature may be altered or maintained in such a manner as to facilitate the comparison of thermometers with a standard —w. cool, n. *Mach.* To cool by means of water, as when using a water-jacket —w. core, n. 1. A hollow core in a water-transparent-looking core. 2. In founding a hollow core through which water may be passed used in casting in molds to cool the metal from within, as in heavy ordnance —w. cow, n. 1. The water-buffalo. 2. [Brit. Guiana] A manatee —w. crane, n. A crane that sometimes appears in steel in the process of hardening —w. crane, n. 1. A water-biscuit. 2. A Prince Rupert drop. See ILLUS under drop —w. craft, n. A craft for sailing on water —w. crane, n. 1. The European spotted rail. 2. The water-rail. 3. The Australian swamp crane. 4. The water-ouzel —w. crane, n. 1. A crane for turning water from a railway-tank into a locomotive-tender. 2. A crane worked by water by hydraulic crane —w. crane, n. 1. [Eng.] The coot. 2. The water-ouzel —w. crawl, n. [Local, U. S.] The darter, water-turkey —w. culture (*Physiol.*), the cultivation of plants in distilled water in which definite amounts of mineral salts have been dissolved used in laboratory experiments and tests —w. curtain, n. 1. *Afric.* A sheet of flowing or dripping water to protect one section of a mine from fire originating in an adjoining section used in coal-mines where fire-damp is encountered. 2. Any sheet of dripping or flowing water that may serve as a screen to prevent the spread of fire, as in a theater between the stage and auditorium —w. cyle, n. A boat propelled with pedals similar to those of a bicycle —w. deck, n. A dragona horse —w. deer, n. 1. A small antlerless reddish cervine deer (*Hydropotes inermis*) of China, resembling the musk-deer. 2. The water-chevrolat —w. deerlet, n. The water-chevrolat —w. devil, n. The predatory aquatic larva of any one of various insects, as of a hydrophilid beetle or the hellgrammite —w. dock, n. Any of several docks, especially, the swampdock (*Rumex crispus*), the common water-dock (*R. britannica*), and the European dock (*R. hydropathum*) —w. dock, n. 1. A water-caster, urinalist —w. dragon, n. Same as WATER-ANUM —w. drain, n. A drain for carrying off waste or surplus water, as from a cellar —w. drainage, n. w. dressing, n. *Pathol.* The treatment of wounds, especially of saturated by continuous application of water —w. dress, n. means of saturated by continuous application of water —w. drill, n. A power drill in which water is forced through the bit —w. wash-drill —w. drinker, n. 1. One who drinks water. 2. [Coloq.] A total abstainer —w. drip, n. A receptacle for the drip from foun-

Water-carrier in the Philippine Islands, showing the bamboo tubes containing this water.

Same as WATER-BAR, 1 —w. breather, n. An animal that breathes water by means of gills —w. bridge, n. 1. A hollow bridge in a boiler, containing water, and used for wrapping pipes, but admitting the passage of flame above and below. Compare FIRE-BRIDGE, MIDFEATHER —water-bron, n. [Scot.] Water-grease —w. brose, n. [Scot.] Brose or potage

eets, refrigerators, water-coolers, etc. — *w. drop*, *n* A drop of water, poetically, a tear — *w. dropper*, *n* An electrical apparatus devised by Sir William Thomson, for measuring the atmospheric potential. It consists of an insulated tank from which a nozzle projects, out of which water drops, each drop carrying off an electrostatic charge till the orifice assumes the potential of the air, which is then measured by an electrometer — *w. drum*, *n* A boiler-tank which can be filled while the boiler (of the water-tail type) continues working — *w. dust*, *n* Minute drops of condensed atmospheric vapor, of which the clouds, fogs, etc., are composed — *w. eagle*, *n* The osprey — *w. elder*, *n* The cranberry-tree — *w. elephant*, *n* The hippopotamus — *w. elevator*, *n* 1. Any mechanism for raising water, especially to a considerable height above ground, as a windmill operating a pump. 2. An elevator or lift operated by hydraulic power — *w. elm*, *n* 1. The white elm so called because within certain portions of its limits it is found only in river-bottoms. 2. The planer-tree. 3. The *Zelkova acuminata* a Japanese tree — *w. engine*, *n* 1. An engine for lifting water. 2. A water-motor — *w. equivalent*, *n* Physics The mass of water whose thermal capacity is equivalent to that of a given mass of another substance — *w. ermine*, *n* [Eng] A variegated tiger-moth (*Spilosoma urticae*) — *w. eryngium*, *n* A button-snakeroot (*Eryngium aquaticum*) — *w. extractor*, *n* Same as HYDRO-EXTRACTOR — *w. farming*, *n* Culture of aquatic plants for market — *w. fennel*, *n* 1. A water-dropper (*Echanthe phellandrium*) 2. The vernal water-starwort (*Callitriche palustris*) — *w. fern*, *n* 1. The common royal fern (*Osmunda regalis*) with sterile fronds twice pinnate. 2. A fern of some other species of the genus *Osmunda* 3. Any plant of the order Salicoides — *w. fight*, *n* [Rare] A naval battle — *w. figwort*, *n* Water-hemlock — *w. flinder*, *n* One who finds water by means of a divining-rod a biontist — *w. finished*, *a* Denoting a highly glazed paper which is supercalendered while moist — *w. fire*, *n* A small East-Indian weed (*Bergia ammannioides*) with an aerial spike, growing in wet grounds — *w. flannel*, *n* A flannel-like mass of the entangled filaments of certain algae, especially of the genus *Cladophora*, floating on the surface of water — *w. flaxseed*, *n* The greater duckweed, whose fronds, floating on the water, resemble flaxseed — *w. flea*, *n* 1. A minute fresh-water cladoceros crustacean that swims with springs or jerks. Some, as the common *Daphnia pulex*, become red in summer and impart a red tinge to ponds, etc. 2. Some similar small entomostrean, as a cypselop — *w. float*, *n* A float used to operate a valve in a boiler, tank or the like, by rising and falling with the water in it — *w. flood*, *n* [Archaic] A flood of water, deluge — *w. flogger*, *n* [Local, U S] The sand-dropper — *w. flowing*, *a* [Rare] Flowing, as a stream of water — *w. fly*, *n* A perid; stone-fly — *w. foot*, *n* *Echin* A tube-foot or ambulacral sucker — *w. fowl*, *n* A bird that lives on or about fresh or salt water, used also collectively — *w. fox*, *n* 1. A carp. 2. The yak — *w. frame*, *n* A primitive spinning-jenny, first driven by water, an Arkwright jenny — *w. fright*, *n* Morbid dread of water, hydrophobia — *w. fringe*, *n* The marsh-flower — *w. front*, *n* 1. The part of a town fronting on the water, real property abutting on or overlooking a natural body of water. 2. That part of a water beating system in front of the fire-box — *w. fungus*, *n* Bot 1. Any fungus of the order Saprolegniales. 2. Any one of the algal fungi (*Phycomycetes*) — *w. furrow*, *n* To drain water from by furrows, to make drainage-furrows in a water-course — *w. furrow*, *n* A furrow made to lead surface-water away — *w. gauge*, *n* A gauge indicating the level of water in a boiler, tank, or reservoir, for a boiler, usually an upright glass tube connected with the boiler at both ends so that the water-level in the tube is always the same as that in the boiler — *w. gauge*, *n* — *w. gall*, *n* 1. A hollow in the earth made by a waterspout or flood, wasbout — *w. gull*, *n* 2. A partial rainbow weather-gall; wind-dog; wind-gall; *w. gang*, *n* [Scot or Obs] A mill-race — *w. gap*, *n* See GAP, 2 — *w. gas*, *n* See GAS, 2 — *w. gate*, *n* 1. A gate by which water may be confined or released. 2. A gate giving access to a river, fountain, well, etc., as the water-gate of the Tower of London. 3. A gate-valve in a water-main — *w. gate*, *n* [Scot or Prov Eng] A natural way or course for a stream, especially one that dries in summer — *w. gravel*, *n* Rent paid for fishing, or any river privilege — *w. germander*, *n* A creeping European marsh-plant. See GERMANDER — *w. gilder*, *n* — *w. gliding*, *n* Same as WASH-GILDING — *w. gillyflower*, *n* Same as WATER-LEATHER — *w. gladiolus*, *n* The flowering rush. See RUSH — *w. gland*, *n* Bot A gland composed of a small number of cells, destitute of chlorophyll, situated beneath a water-pore and serving to facilitate or regulate the transpiration of water — *w. glass*, *n* 1. A water-clock, clepsydra. 2. A submarine telescope. See TELESCOPE. 3. Soluble glass. See GLASS, 4. A water-glass (silicate of soda) used in painting, fresco water-coloring on a surface treated with solutions of potassium water-glass and ferrous silicic acid — *w. glue*, *n* Water-proof glue — *w. god*, *n* Myth A deity residing in or presiding over a spring or fountain, or any body of water — *w. gram-dee* (Physics), the quantity of heat required to raise one gram of water through one degree between 0° and 4° C — *w. grampus*, *n* [Local, U S] The hellgrammite — *w. grass*, *n* 1. Any one of various species of *Paspalum*, especially, *P. dilatatum*, the large water-grass and *P. leucomerum* the smooth water-grass. 2. The panic-grass (*Panicum proflerum*), a tall, rankly-growing plant occurring in wet lands in the southern U S. 3. The watercress (*Roripa nasturtium*) 4. The many-flowered marsh-pennywort (*Hydrocotyle umbellata*) 5. [Tasmania] Manna-grass (*Glyceria fluitans*) — *w. grate*, *n* A grate in which tubes connecting with the water in the boiler take the place of solid grate-bars — *w. gruel*, *n* A gruel made with water instead of milk — *w. guard*, *n* A policeman or customs-house officer appointed to guard a harbor or water-front — *w. gum*, *n* 1. A small Australian tree, or, as cultivated for ornament in grounds, a tall slender shrub (*Wrightia neriifolia*) with opposite leaves, and yellow flowers, a terminal corymb — *w. gum tree*, *w. gum*, *n* A green-spored alga found in both salt and fresh water, with a bulbous tubular frond — *w. hair-grass*, a smooth perennial grass (*Calobrya aquatica*) with long narrow flat leaves and open panicles, common in wet places in north temperate regions — *w. whorl-grass* — *w. hardened*, *a* In fish-culture, made firm by absorbing water, said of eggs — *w. hani*, *n* In fishing, an empty haul of the net hence, a fruitless attempt — *w. hare*, *n* A hare of water-dust — *w. heater*, *n* A heating-apparatus consisting of pipes of circulating hot water — *w. hemp*, *n* Any one of three different plants, hemp-agricomy, water hemp-agricomy, and Virginian hemp. See HEMP — *w. hen*, *n* 1. A gallinule, especially the European *Gallinula chloropus*, common about ponds and streams. 2. The American coot. 3. [Australia] Any one of certain species of *Tribonyx* — *w. hoarhound*, *n* A British herb (*Lycopus europaeus*) of the mint family, with white flowers, growing by riversides also, by extension, other species of the genus — *w. hoarhound* — *w. hog*, *n* 1. A caudate. 2. A wart-hog — *w. horse*, [Local, U S] 1. A To heap

up (salted fish) to drain. II. A horse-pile — *w. horse-power* [India], the unit of measurement of the power developed by falling water in practice usually considered as 6 of the actual power of the water — *w. horsefall*, *n* Any plant of the genus *Chara*, a stonewort — *w. house*, *n* A ship — *w. ice*, *n* 1. An ice made with water, sugar, and fruit-juice only, as distinguished from ice-cream. 2. Ice made from water as distinguished from snow ice — *w. inch*, *n* Hydraulic As much water as will flow out during twenty-four hours through a round opening one inch in diameter just below the surface of the water in a reservoir about 500 cubic feet. The water-inch is commonly known as millers' inch, used to measure the rate of flow of a stream and yields 90 cubic feet or 673.2 gallons in one hour's time through a square-inch aperture the upper edge of which is 6 inches below the surface of the water — *w. indicator*, *n* A water-gage for giving the level of water in a tank or boiler, and automatically sounding an alarm if it falls too low — *w. injector*, *n* See INJECTOR — *w. jet*, *n* A hydraulic propelling device for vessels. 2. A stream of water under pressure, used for removing surface soil or for boring — *w. joint*, *n* 1. A water-tight joint. 2. A drip-joint — *w. jump*, *n* A waterfall — *w. junket*, *n* [Prov Eng] The common European sandpiper — *w. kelpie*, *n* Same as KELPIE — *w. kilbible*, *n* A large iron bucket with a valve in the bottom for self-filling, sometimes used in hoisting the water from a mine — *w. ladet*, *n* A channel for water, drain, gutter — *w. laid*, *a* 1. Laid back-handed or left-handed said of rope. 2. Same as CABLE-LAID said of rope, because that form resists the entrance of water. 3. *Geol* Water-deposit — *w. language*, *n* [Rare] Bantling tall, railery chaft — *w. laverock*, [Scot] 1. The common European sandpiper. 2. The ring-plover — *w. leader*, *n* A water-carrier — *w. leech*, *n* A horse-leech — *w. leg*, *n* The leg of a steam-boat. See LEG, 10 — *w. lens*, *n* Physics A magnifying lens in which water is the refracting medium — *w. lentil*, *n* The lesser duckweed (*Lemna minor*) — *w. lizard*, *n* 1. [U S] A lizard-like amphibian, as a newt. 2. An aquatic lizard, as a varanid — *w. dock*, *n* A lock for confining water and raising or lowering its level, as a canal-lock or weir-lock. See LOCK, 1. 3 — *w. locust*, *n* The swamp-locust (*Gleditsia aquatica*) of the southern United States, a smaller species of the honey-locust, with usually simple and slender thorns — *w. lord*, *n* An owner of river or pond rights — *w. lot*, *n* 1. A town or city lot contiguous to water, as on a river or harbor. 2. A similar lot under water or in a swamp or morass, but mapped out for redemption — *w. lotus*, *n* The sacred lotus — *w. lung*, *n* A respiratory tree of a holothurian — *w. lute*, *a* A diaphragm or valve, as in a drain, to permit the flow of water while obstructing the return of air or noxious gas — *w. main*, *n* A principal pipe for conveying water having lateral service-pipes connected with it — *w. maize*, *n* The seeds of the Victoria water-lily (*Victoria regia*) used as food in South America — *w. mantle*, *n* In culture of germs, the water that is kept at a given temperature in the jacket about the incubator, in order to keep the germs at that temperature — *w. maple*, *n* The red maple, silver maple — *w. marigold*, *n* An aquatic plant (*Bidens beckii*) with terminal heads of yellow flowers, the immersed leaves crowded, capillary dissected, and the emerged ones lanceolate, slightly connate, and toothed — *w. meadow*, *n* A meadow periodically overflowed by a stream — *w. measure*, *n* A measure formerly used for goods carried in British ships as coal, oxygen, etc., and equal to about 11 imperial gallons — *w. measurer*, *n* A hydrometric device, skater — *w. meter*, *n* A device for measuring the quantity of water flowing through it as from a main to the pipe of a consumer. See PISTON-METER — *w. mill*, *n* 1. Any mill, as a flour-mill, whose machinery is operated by water-power — *w. mint*, *n* Any Old World mint — *w. mint*, *n* A mint (Mentha) naturalized in the eastern United States, growing in wet places, resembling peppermint — *w. mite*, *n* An aquatic hyacinth mite, having the legs ciliated for swimming, and parasitic young on aquatic insects and other animals — *w. mole*, *n* 1. A desman. 2. The duckbill or platypus — *w. monitor*, *n* A large aquatic varanoid lizard, as *Varanus salicitor* of India — *w. monkey*, *n* Same as MONKEY — *w. moth*, *n* 1. A caddis-fly. 2. A moth of the genus *Nymphula*, *Hydrocampa*, or *Acentropus*, whose larvae live in or under water — *w. motor*, *n* An engine driven by water, as by the action of water in the buckets of a wheel, or under pressure on a piston-head, etc. — *w. moudse*, *n* A beaver-rat — *w. murrell*, *n* A disease affecting the urine of cattle — *w. newt*, *n* A triton — *w. nixy*, *n* A water-sprite helpe, horse-nymph — *w. nile*, *n* — *w. nymph*, *n* 1. A Nalad. 2. Bot A Nalad, any plant of the genus *Najas*, also, a water-lily. 3. A dragon-fly — *w. oats*, *n* *pi* Indian rice. See RICE — *w. of Ayr*, *Ayr stone*, *w. of Ayr stone*, *w. of crystallization*, the water that combines with salts when they crystallize. It is a definite quantity, and may be accepted as a molecular constituent of the salts, and is usually referred to as the water of crystallization — *w. of life*, *1*. In Scripture, that which confers immortality or spiritual invigoration. 2. Same as ELIXIR 2 (2). 3. Brandy also whisky — *w. of saturation* (*Geol*), water filling the interstices in rocks — *w. on the brain*, hydrocephalus — *w. on the chest*, hydrothorax — *w. on the knee* (*Pathol*), an excessive accumulation of serous fluid within the capsule of the knee-joint: from any cause — *w. opal*, *n* Same as HYALITE — *w. opossum*, *n* The yak — *w. ordinal*, *n* Ordinal by throwing an accused person into the water, to see if he sinks, or by making him plunge his hand into hollow water. See ORDEAL — *w. organ*, *n* A hydraulic organ. See ORGAN — *w. oven*, *n* A drying-oven — *w. ox*, *n* Same as WATER-BUFFALO — *w. padda*, *n* A South-African crayfish toad (*Breviceps gibbosus*) — *w. pan*, *n* A slough — *w. pang*, *n* Water-hrash, pyrosis — *w. parsnip*, *n* Any species of *Sium*, a genus of aquatic herbs of the parsley family — *w. parting*, *n* A watered — *w. partridge*, *n* [Local, U S] The ruddy duck — *w. passage*, *n* A passage for water, as the urethra — *w. pennywort*, *n* The marsh-pennywort. See MARSH, HYDROCOOTILE — *w. pepper*, *n* 1.

Disk Type of Water-meter

The water passing in under pressure at a enters the annular chamber (c) by an inlet-port not shown in the illustration and makes a horizontal current of it thus causing the disk (d) to revolve somewhat like a top that is about to stop, and finally issues at e. Every time the chamber (c) is thus filled and mold, *n* Bot Any empty the train of gears (f) receives plant of the order from the epistle (g) an impulse that is Saprolegniales — *w.*, recorded on the dial (d) mole, *n* 1. A desman. 2. The duckbill or platypus — *w. monitor*, *n* A large aquatic varanoid lizard, as *Varanus salicitor* of India — *w. monkey*, *n* Same as MONKEY — *w. moth*, *n* 1. A caddis-fly. 2. A moth of the genus *Nymphula*, *Hydrocampa*, or *Acentropus*, whose larvae live in or under water — *w. motor*, *n* An engine driven by water, as by the action of water in the buckets of a wheel, or under pressure on a piston-head, etc. — *w. moudse*, *n* A beaver-rat — *w. murrell*, *n* A disease affecting the urine of cattle — *w. newt*, *n* A triton — *w. nixy*, *n* A water-sprite helpe, horse-nymph — *w. nile*, *n* — *w. nymph*, *n* 1. Compare FIRE-PLUG — *w. poa*, *n* The reed meadow-grass (*Glyceria grandis*) now a misnomer, the name having been applied when the grass was included in the genus *Poa* — *w. pocket*, *n* 1. A depression in a water-course, or on a mess or plain, which holds water for a longer or shorter period after a rain. 2. [Local, U S] A bowl in rock-structure that has been formed by the action of falling water, especially such a bowl existing behind the waterfall when, in time of flood, the water shoots over it — *Water Poet*, the pseudonym of John Taylor — *w. pole*, *n* A hydrometer — *w. poppy*, *n* Same as HYDROCYCLES — *w. pore*, *n* 1. Bot An aperture in the epidermis of the leaves of certain plants directly over the extremity of a vein, devoted at certain times to the transpiration of water. Such pores resemble ordinary stomata except that they have no guard-cells. 2. *Zool* The orifice of the water-tubes in certain invertebrates — *w. port*, *n* An opening for the passage of water, as in a water-motor — *w. post*, *n* A post to which is attached a pressure-gage, for convenient observation of the pressure in the main below, with which it is connected — *w. pouch*, *n* *Zool* The water-reservoir in the stomach of a camel — *w. pouke*, *n* A pimple — *w. pox*, *n* Same as VARICELLA — *w. prairie*, *n* pl The prairies of New Mexico, vast inland plains covered with a nitrous incrustation or efflorescence, known as *tesquite*, which gives them the appearance of large motionless lakes — *w. press*, *n* A hydrostatic press — *w. prick*, *n* In tanning, a blemish on the grain surface of skins caused by excessive water-soaking — *w. prism*, *n* The body of a canal or river considered as a prism and measured from a cross-section — *w. privilege*, *n* 1. The right to the use of the water of a certain stream. 2. The right to the possession and use of a fall of water for mechanical purposes — *w. propeller*, *n* A rotary pump — *w. pump*, *n* A pump for water applied humorously to the eyes — *w. puppy*, *n* A large salamander mud-puppy — *w. purple*, *n* [Scot] The beebunga — *w. pyet*, *n* Same as WATER-PIET — *w. quaker*, *n* A violent agitation of water the correlative of earthquake — *w. equalm*, *n* Pyrosis. See WATER-BRASH — *w. quenched*, *a* Cooled with water as steel in tempering — *w. quintain*, *n* A tilt at the quintain by a person in a boat — *w. rabbit*, *n* A water-bare — *w. radish*, *n* A European herb (*Nasturtium amphitium*), with pinnatifid leaves and yellow flowers, growing in wet places — *w. rail*, *n* 1. A rail of the genus *Rallus*, especially the Old World quail — *w. rail*, *n* 2. A quail frequenting swamps and the neighborhood of water. 2. [Local, Eng] The water-ben — *w. ram*, *n* A hydraulic ram — *w. ranny*, *n* [Eng] 1. A watershrew. 2. The water-vole — *w. rat*, *n* 1. Any aquatic murid rodent. 2. [Scot] The European water-vole. (2) The American muskrat. (3) [Australia] A beaver-rat. 2. The beaver. 3. [Cant or Slang] A water-front thief or tough — *w. rate*, *n* A rate or tax for a water-privilege — *w. rent*, *n* — *w. rattler*, *n* [Local, U S] The diamond rattlesnake usually found near water — *w. rattle*, *n* — *w. reed*, *n* Any grass of either of the genera *Arundo* and *Phragmites* — *w. ter-ger*, *n* [S Afr D] The right to direct a fixed quantity of water from the main supply to irrigate adjoining private lands — *w. ret*, *n* Same as WATER-BOT — *w. retriever*, *n* A dog bred and trained to retrieve game-birds from the water — *w. rice*, *n* A perennial grass (*Zizania aquatica*), of Asia and North America, whose seeds furnished food for the Indians Indian rice — *w. right*, *n* Law The right to the use of water either from a certain source or in specified quantity, especially, such right contracted for the sake of irrigation uses. Compare RIPARIAN RIGHTS — *w. rolin*, *n* A flycatcher (*Xanthopygia fuliginosa*) of the Himalayas and eastward — *w. rocket*, *n* 1. An Old World plant (*Sisyrinchium rostrata*) allied to the bedstraw. 2. An aquatic firework — *w. rolled*, *a* *Geol* More or less rounded and smoothed by the mechanical action of moving water, in the waves on a beach, or in the current of a stream — *w. room*, *n* The space in a steam-boiler taken up by the water distinguished from steam-room — *w. rose*, *n* [Eng] 1. The white water-lily. 2. The yellow pond-lily — *w. rot*, *n* To cause to rot, as flax after pulling by steeping in water — *w. rot*, *n* — *w. route*, *n* A course from one point to another upon somebody of water — *w. rug*, *n* A variety of dog — *w. sail*, *n* A small sail sometimes set below a lower studding-sail its position being thus just over the surface of the water — *w. salamander*, *n* A water-newt — *w. sal-low*, *n* The European water-willow (*Salix aquatica*) — *w. sapphire*, *n* A rich blue variety of jade often worn as an ornament — *w. scorpion*, *n* A large predaceous aquatic neplid bug, scorpion-hug, as *Nepa cinerea* — *w. screw*, *n* 1. A machine for raising water, consisting of helical tubes set on an inclined rotating axis, after the manner of an Archimedian screw, also a modernized form of the Archimedian screw, in which the screw turns and the cylinder is stationary. 2. A screw propeller — *w. seal*, *n* A quantity

fruit is usually ellipsoidal, with a smooth and green, often mottled or striped, skin, and a pinkish or yellowish pulp containing many seeds and a sweet watery juice

*wa'ter-mōc*, *1 wō'tar-mōc*, *2 wā'ter-mōc*, *n* 1. See *MOCCASIN* 2. The harmless water-snake (*Tropidonotus aspidon*) erroneous use

*wa'ter-mēt*, *1 wō'tar-mēt*, *2 wā'ter-mēt*, *n* Any fresh-water alga of the genus *Hydrodictyon*

*wa'ter-newt*, etc See under *WATER*, *n*

*wa'ter-nūt*, *1 wō'tar-nūt*, *2 wā'ter-nūt*, *n* The water-chestnut or water-caltrop (*Trapa natans*) Compare SINGHARA NUT, under NUT — bitter *water-nūt*, the nutmeg-hickory (oak) See table under OAK

*wa'ter-oak*, *1 wō'tar-ōk*, *2 wā'ter-ōk*, *n* The duck-water-oaks, *w. parslip*, etc See under *WATER*, *n*

*wa'ter-ōut*, *1 wō'tar-ōt*, *2 wā'ter-ōt*, *n* A clindoid bird of Europe and America, a dipper See *DIPPER*

*wa'ter-phone*, *1 wō'tar-fōn*, *2 wā'ter-fōn*, *n* An instrument for observing the flow or leakage of water in pipes by magnifying the sound through a receiver and telephonic trumpet [*< WATER + Gr phōnē, sound*]

*wa'ter-plm*, *1 wō'tar-plm*, *2 wā'ter-plm*, *n* 1. *Water-plm* par-nel, *2 wā'ter-plm* par-nel, *n* Either of two marsh-plants of the United States and Europe, brookweed

*wa'ter-plm*, *1 wō'tar-plm*, *2 wā'ter-plm*, *n* 1. A small tree (*Glyptostrobus heterophyllus*) from China and Japan The Chinese plant it along canals and creeks

*wa'ter-pipe*, *1 wō'tar-pāp*, *2 wā'ter-pāp*, *n* 1. A pipe for conveying water 2. A device for tobacco-smoking in which the smoke is drawn through water, as in the narghile or hookah 3. [Archae] A waterspout

*wa'ter-pitch*, *1 wō'tar-pīch*, *2 wā'ter-pīch*, *n* 1. Any pitcher for holding water, loosely, a water-jug or jar 2. *Bot* Any plant of the American pitcher-plant family

*wa'ter-plan*, *1 wō'tar-plan*, *2 wā'ter-plan*, *n* 1. A common smooth herb (*Alisma plantago*) of ponds and ditches, with leaves like those of the common plantain — *water-plantain* spearwort, see *SPEARWORT*

*wa'ter-pot*, *1 wō'tar-pōt*, *2 wā'ter-pōt*, *n* A vessel for holding or carrying water. Specif (1) A water-pot (2) A chamber-pot

*wa'ter-pow'er*, *1 wō'tar-pōw'ar*, *2 wā'ter-pōw'ar*, *n* 1. The power of water derived from its gravity or its momentum as applied or applicable to the driving of machinery 2. A descent or fall in a stream from which motive power may be obtained, specif. in law, the fall in a stream in its natural state, as it passes through a person's land or along the boundaries of it

*wa'ter-proof*, *1 wō'tar-prūf*, *2 wā'ter-prūf*, *n* To render water-proof, as cloth, by treatment with paint or indiarubber — *wa'ter-proof'er*, *n* — *wa'ter-proof'ing*, *n* A substance the application of which to other materials renders them water-proof

*wa'ter-proof*, *n* Proof against water, permitting no water to enter or pass through

*wa'ter-proof*, *n* Material rendered impervious to water, also, a garment made from such material, as an indiarubber storm-coat, a mackintosh

*wa'ter-pūrs'lane*, *1 wō'tar-pūrs'lan*, *2 wā'ter-pūrs'lan*, *n* 1. An Old World prostrate red-stemmed herb (*Pepis portula*) common in watery places 2. A herb (*Ludwigia pulchris*) with a reddish stem, prostrate and creeping in muddy places and floating in water 3. An aquatic herb (*Didymis diandra*), usually submerged, sometimes rooting in the mud, with opposite linear leaves and very small greenish flowers

*wa'ter-quake*, *n*, rabbit, etc See under *WATER*, *n*

*wa'ter-re-serve*, *1 wō'tar-rē-zūv*, *2 wā'ter-rē-zūv*, *n* Land set apart as a source of water-supply to feed streams

*wa'ter-scape*, *1 wō'tar-skēp*, *2 wā'ter-skēp*, *n* [Rare] A sea- or other water-view, as distinguished from a landscape

Land and water scenes are interspersed in the same picture, yet they blend. TOWNSEND *Art of Speech* vol 1, p 55 [L 1860]

*wa'ter-scol*, *1 wō'tar-skol*, *2 wā'ter-skol*, *n* 1. The line of separation between two contiguous water-basins or drainage-valleys, a divide 2. The whole region from which a river receives its supply of water, as, the watershed of the Hudson

*wa'ter-shield*, *1 wō'tar-shīld*, *2 wā'ter-shīld*, *n* 1. An aquatic herb (*Brasenia purpurea*) with stems and lower sides of the leaves covered with a viscid jelly 2. Any plant of the kindred genus *Cymbella* — fish-grass? 3. The shore of a body of water, the water's brink

*wa'ter-skāp*, *1 wō'tar-skāp*, *2 wā'ter-skāp*, *n* [S Afr] A tragelaphine antelope the nakong

*wa'ter-snake*, *1 wō'tar-snēk*, *2 wā'ter-snēk*, *n* A serpent of aquatic habits (1) A harmless colubrine serpent of *Tropidonotus* or a related genus, as the common *T. aspidon* of the United States and the common ringed snake (*T. natrix*) of Europe (2) An East-Indian fresh-water fish-eating homalopsid serpent (3) A wart-snake (4) A sea-snake or hydrophid

*wa'ter-sol'dier*, *1 wō'tar-sōl'jār*, *2 wā'ter-sōl'jār*, *n* A curious European aquatic plant (*Stratiotes aloides*), attached to the mud by a cord-like runner, or suspended free in the water, raising only its flowers and some of the leaves above the surface

*wa'ter-spēd*, *1 wō'tar-spēd*, *2 wā'ter-spēd*, *n* 1. A fleshy speedwell (*Veronica anagallis*)

*wa'ter-spīd'er*, *1 wō'tar-spīd'ar*, *2 wā'ter-spīd'ar*, *n* 1. A spider that lives or seeks its prey about or in the water (1) A drassid, the diving spider (*Argyropea aquatica*), that lives under water in a web shaped like a diving-bell with the mouth downward It fills this structure with air carried down in the form of bubbles attached one at a time on the legs and sperianteries (2) One of various lycosids, especially of the genus *Dolomedes*, as the large American raft-spider (*D. lanceolatus*) 2. A water-mite

*wa'ter-spout*, *1 wō'tar-spūt*, *2 wā'ter-spūt*, *n* 1. A moving column of spray and mist, with considerable masses of water in the lower parts, due to a whirlwind over the water at sea See *ILLUS* in next col

The whirl that makes a *water-spout* must have sufficient velocity to form a vacuum at its center

J D STEELE *Physics* p 219 [CHAUT]

A whirling funnel-shaped cloud, first observed as a pendant from the mass of storm-cloud above, seems to grow downwards, tapering towards the water-surface which is violently agitated, and finally (when the spout is fully developed) appears to be drawn up to meet the cloud from above This appearance is deceptive, as the bulk of the water carried along by the whirling spout is condensed from the atmosphere, and, even when the spout is formed over a salt-water surface, is found to be fresh *Water-spouts* occur most frequently over the warm seas of the tropics, but they are not confined to the warmer tropical seasons, or even to low latitudes. *Encyc Brit* 11th ed, vol xxviii, p 386

Successive Phases of a Waterspout in the Red Sea, Sept 21, 1893 (*La Nature*, Paris)

2. A pipe for the free discharge of water, especially one connecting with the gutters of a roof, any spout, tube, or nozzle from which water flows or is ejected, especially by the force of gravity

*wa'ter-star*, *1 wō'tar-stār*, *2 wā'ter-stār*, *n* 1. An aquatic herb (*Heteromithrium dubia*) of the pickerel-weed family, with a floating stem rooting at its lower joints, submerged grass-like leaves, and yellow flowers found in the northern United States

*wa'ter-starwort*, *1 wō'tar-stār-wūrt*, *2 wā'ter-star-wūrt*, *n* Any plant belonging to the genus *Callitriche*

*wa'ter-sup-ply*, *1 wō'tar-sū-plī*, *2 wā'ter-sū-plī*, *n* An artificial supply of water used for a given purpose, as for service in cities or for manufacturing, as distinguished from a natural supply, especially, a system for collection, as in reservoirs, and for distribution, as through mains and pipes

*wa'ter-tab'by*, etc See under *WATER*, *n*

*wa'ter-tā'ble*, *1 wō'tar-tā'bl*, *2 wā'ter-tā'bl*, *n* 1. Arch. A projecting ledge, molding, or course of masonry along the sides of a building to shed the rainfall

The foundations are finished up to the *water-table*. *New York Tribune* Feb 29, 1892, p 4 col 2

2. *Car-building* A horizontal board with heveled top, running underneath the windows the entire length of a car

3. The irregular upper surface of the zone of saturation by ground-water

*wa'ter-thrush*, *1 wō'tar-thrōsh*, *2 wā'ter-thrōsh*, *n* 1. An American warbler of the genus *Seiurus*, frequenting swamps and streams *S. noveboracensis* is the common or small-billed water-thrush of eastern North America, olive-brown above, pale-yellowish beneath, with dusky streaks and two superciliary lines *S. motacilla*, the large-billed or Louisiana water-thrush, is similar, with a white superciliary line

2. The water-ouzel 3. The water-wagtail 4. An ant-thrush or pittid

*wa'ter-ton*, *1 wō'tar-tōn*, *2 wā'ter-tōn*, Charles (1782–1865) An English naturalist and traveler

*wa'ter-tow'er*, *1 wō'tar-tōw'ar*, *2 wā'ter-tōw'ar*, *n* 1. A stand-pipe or its equivalent, often of considerable height, giving a head to a system of water-distribution 2. A steel tower-like frame hinged on a wheeled truck and hoisted when in use, to sustain a large hose-type surmounted by a controllable nozzle, by means of which the combined streams from several fire-engines may be poured into or upon burning buildings from a great height and within an effective distance 3. A tower in which a falling spray of water is used to wash gas, etc

*Wa'ter-town*, *1 wā'ter-tōwn*, *2 wā'ter-tōwn*, *n* 1. A town in Litchfield county, Conn 2. A town in Middlesex county, Mass 3. A city, county-seat of Jefferson county, N Y 4. A city, county-seat of Codington county, South Dakota 5. A township and city in Jefferson county, Wis seat of Northwestern University (Lutheran), founded in 1865

*wa'ter-tree*, *1 wō'tar-trē*, *2 wā'ter-trē*, *n* 1. (Sierra Leone) A climbing shrub (*Tetracera alnifolia*) common in western tropical Africa so called because its stems when cut across yield a quantity of clear water 2. The Australian pin-wash or needle-bush (*Hakea leucophaea*) so called from the water obtained by tapping its roots

*Wa'ter-Vā'ley*, A city in Yalohusha county, Miss

*Wa'ter-vīl'e*, *1 wō'tar-vīl*, *2 wā'ter-vīl*, *n* 1. A city in Kennebec county, Me seat of Colby College (Baptist), founded in 1820 2. A village in Onondaga county, N Y

*wa'ter-vīn'e*, *1 wō'tar-vōin*, *2 wā'ter-vōin*, *n* 1. A shrubby climber (*Phytocrene gigantea*), of the forests of Burma, which yields, when its stem is cut, a watery sap 2. A shrubby climber (*Dolichopus calanina*) growing in tropical South America

*Wa'ter-vīl'et*, *1 wō'tar-vīl't*, *2 wā'ter-vīl't*, *n* A city in Albany county, N Y, site of a United States arsenal

*wa'ter-wāg'tail*, etc See under *WATER*, *n*

*wa'ter-way*, *1 wō'tar-wē*, *2 wā'ter-wē*, *n* 1. A channel or stream of water as a means of communication;

Inter-oceanic Waterway at Panama, showing the system of locks and lock-gates (a, closed, b, open) of the Panama Canal

water-route, in a harbor, etc, the fairway or channel

2. *Ship-building* The channel along the edge of the deck for leading water to the scuppers, or the deck-planks, etc., of which such channel is formed 3. The extent of an opening for the passage of water 4. *Mech* The passage-area of any cock or valve when full-open

*wa'ter-weed*, *1 wō'tar-wēd*, *2 wā'ter-wēd*, *n* The water-thyme or choke-pondweed (*Phyllitria canadensis*). See *ANACHARIS*, *PONDWEED* and *BABINGTON'S CURSE*

*wa'ter-wheel*, *1 wō'tar-hwīl*, *2 wā'ter-hwīl*, *n* 1. A wheel so arranged with floats, buckets, etc., that it may be turned by flowing water used to drive machinery raise water, etc. See *ILLUS* on p 2686 The *overshot* and *undershot* water-wheel, the *breast-wheel*, and *tub-wheel* are now largely discarded in favor of the turbine. See the italicized words 2. Loosely, a paddle-wheel — impulse water-wheel, an impulse water-turbine — lift *w*. 1. A

water-wheel on a horizontal shaft that may be raised and lowered according to the height of the water 2 An undershot wheel — w.gate, a gate for regulating the amount of water supplied to a water-wheel, thus varying the power

wa'ter-wil'low, 1 wā'ter-wil'lo, 2 wā'ter-wil'lo, n 1. An American perennial herb (*Dianthus merionis*), with leaves resembling those of a willow, and spikes of purplish flowers 2. Some as WATER-ELLOW

wa'ter-witch, 1 wā'ter-witch, 2 wā'ter-witch, n 1. A water-sprite 2. One of various quick-diving birds, as a dabchick, the buffhead duck, or the American dipper 3. The storm-petrel 4. [Colloq] A person who claims to be able to discover springs, generally by the use of a hazel divining-rod or a branch of a peach-tree

wa'ter-work, 1 wā'ter-wōrk, 2 wā'ter-wōrk, n 1. A system of mochies, buildings, and appliances for furnishing a water-supply, especially for a city formerly so used in the singular, now always in the plural form, whether with singular or plural meaning 2. An artificial fountain in which various effects are produced, as by sprays, jets, cascades, etc 3. Wall-painting executed in size or distemper 4. Painted canvas used in place of tapestry 5. A marine view

wa'ter-wort, 1 wā'ter-wōrt, 2 wā'ter-wōrt, n 1. Any plant of the genus *Elatine*, also, any plant of the family *Elatinaceae* wa'ter-wort, 2. Any plant of the Asiatic and Australian waterwort family *Phyllitaceae*

wa'ter-y, 1 wā'ter-y, 2 wā'ter-y, a 1. Containing much water, filled with moisture (1) Discharging water, as clouds (2) Brimming, tearful, as eyes (3) Moist or soggy, as vegetables (4) Soft and fleshy, as fish 2. Of the character of water, thin, transparent, or liquid, as water, as, watery tea, figuratively, ebullient, rapid

Watt, 1 wēt, 2 wāt, n Physics The practical unit of electric power, activity, or rate of work equivalent to 10<sup>7</sup> ergs or one joule per second, or approximately 1/746 of a horsepower

The value of a direct current in watts is equal to the product of the values of the current and the electromotive force (volts x amperes = watts), but with an alternating current the corresponding product denotes apparent watts and must be multiplied by the cosine of the angle of lag to obtain the effective or true watts See UNIT [*<* James Watt, Scottish inventor] volt-amp-ere

— apparent watts, in an alternating circuit, the value obtained by multiplying the voltage and amperage — false watts, in an alternating current, the difference between the true and apparent watts — function watts, true watts, in an alternating circuit, the value obtained by multiplying the product of the voltage and amperage by the cosine of the angle of lag — watt-hour, w.-minute, w.-second, n Elec Electrical energy equivalent to that represented by

one watt for one hour, minute, or second — w.-hour meter, an instrument recording electric energy in terms of watt-hours known erroneously as wattmeter

watt, n [Slam] A pagoda or temple

Watt, James (1736-1/1819) A Scottish inventor, engineer, and mechanic, invented the condensing steam-engine, and with Matthew Boulton built the engine for Fulton's "Clermont"

*welb'y-e-ite*, 1 *wāb'y-e-ite*, 2 *wēb'y-e-ite*, *n* *Mineral* A colorless fluoroborate of the cerium earths that crystallizes in the orthorhombic system [*< P C Weibye*, Norwegian mineralogist]

*welch'el-wood*, 1 *wōk'el-wud*, 2 *wē'el-wōd*, *n* *Bot* The mahaleb-tree or its wood [*< G* *welchsholz*] *weld*, 1 *wid*, 2 *wēd*, *n* [*Scot*] Same as *WEED*  
*Welter'-strass*, 1 *wōl'er-strits*, 2 *wē'er-strits*, *n* [*1815-1918*] A German mathematician - *Welter'-strass*, *si-an*, *o* - *Welters* *trans* coordinates, coordinates devised by Welters for the purpose of investigating planes in non-Euclidean space

*wel'-ge-la*, 1 *wā-jā-la*, *wā-jā-la*, 2 *wē-jā-la*, *wē-jā-la*, *wē-jā-la*, *n* [*xiu*] A species of bush-honeysuckle (see *HONETUCKLE*, 2), a hardy ornamental shrub (*Diervilla rosea*) from China and Japan (see *DIERVILLA*), very widely cultivated for its pink flowers so called from its former botanical name (*Weigela* or *Weigela rosea*). [*< C E Weigel*, German naturalist] *Welfert*, 1 *wū'fert*, 2 *wē'fert*, *n* [*1845-1904*] A German pathologist; inventor of a process, known as *Welfert's* method, of hardening and staining nervous tissues by the use of a solution variously compounded, called *Welfert's* stain.

*welgh*, 1 *wē*, 2 *wē*, *v* 1. To find the weight of by comparing with an authorized unit of weight, as by means of the balance, as, to *welgh* grain, iron, etc 2. To ponder with a view to forming a judgment, estimate the worth or advantages of, make account of, *as*, *welgh* well the proposal 3. To cause to sink by reason of weight, press upon heavily, burden, depress often figuratively, and usually with *down*, as, to *welgh* down the bow of a boat, his sins will *welgh* him down 4. To raise so as to suspend, lift up, as, to *welgh* anchor

*II*: 1. To have a specified weight, as, the man *welghs* eleven stone, it *welghs* but little 2. Figuratively, to be estimated, judged, or held in opinion 3. To be grievous or oppressive, as, what *welghs* upon your mind? 4. *Noun* To raise anchor, begin to sail 5. To consider [*< AS* *wegan*, lift, *cp* OHG *wegan*, *D* *wegen*, *ice* *rega*, *L* *echō*, *Gr* *echō*] *wel*

*See* *balance*, *consider*, *deliberate*, *examine* - to *welgh* down, to sink by gravity - to *w* in, in certain sports, to determine one's weight qualification for competing therein In horse-racing terminology, the jockey is said to *welgh* in at the end of the race, and to *w* out before the start - *welgh*'shar', *n* [*Eng*] A railway-car brake-shaft - *w*, *bar* shaft (*fr*), a rock-shaft in a radial valve-gear - *w*, *shaft*, *n* [*Scot*] A scale-beam in the plural, a pair of scales *welgh*'halk', [*Prov Eng*] - *w*, *n*

*beam*, *n* A large portable steelyard suspended in a frame *w*, *master's* beam; - *w*, *board*, *n* Same as *WATBOARD* - *w*, *box*, *n* A coal-chute which weighs and delivers coal to tenders, coal-cars, etc - *w*, *bridge*, *n* A platform scales - *w*, *can*, *n* A can or receptacle attached to a weighing-scale and having a faucet to permit drawing off any desired portion of its contents - *w*, *chausse*, *n* A building, usually of public character, in which the weight of commodities is ascertained - *w*, *dock*, *n* A lock, as in a canal, in which the weight and tonnage of boats are determined - *w*, *master*, *n* A weigher, especially one licensed as a public weigher *weigh*'man; - *w*, *shaft*, *n* The reversing-shaft of a valve-gear Indusue - *welgh*'a-bi(*cr*), *o* Having weight, capable of being weighed - *welgh*'age, *n* A toll paid for weighing merchandise - *welgh*'ed, *a* Experienced *welgh*, *n* 1. The act of weighing 2. [*Eng*] An estimated weight of any commodity, a definite quantity in terms avoidupois *wey*; *wey*, *v*

*weigh*, *n* Motion of a ship, in the phrase *under weigh* now regarded as a variant spelling of *way* (probably due to the influence of the phrase to *weigh* anchor), but still preferred by many of the best English and American writers, some of whom use it as if it were identical with *weight* and referred properly and originally to weighing anchor See *WAT*, *n*, 13

under *weigh*, in motion, as a ship, often spelled *under way* See *WEIGHT*, *n*, above

On the morning of September 13th 1782 the floating batteries set under *weigh* with a fair wind to proceed to Gibraltar  
John Barrow Richard, Earl Howe p 133 [*v* *m* 1838]

*weigh*, *pp* *weighed*  
*weigh*'er, 1 *wē'er*, 2 *wē'er*, *n* 1. One who or that which weighs, especially, an official who weighs goods or verifies scales and standards 2. The equator a too narrow rendering of the Latin word *aqualis* into English

- *weigh*er and *sacker*, an automatic device for filling sacks as of flour at the mill with a given weight - *weigh*'er-ship, *n* The office of a weigher

*weigh*'ing, 1 *wē'ing*, 2 *wē'ing*, *n* 1. The act of determining weight 2. The quantity of a commodity weighed at one time, as, a *weighing* of lard - *weigh*'ing-cage', *n* A cage for weighing living animals - *w*, *head*, *n* The fixed head of a hydraulic testing-machine containing a water-chamber to which the pressure is applied - *w*, *house*, *n* Same as *WEIGH-HOUSE* - *w*, *machine*, *n* Any apparatus for ascertaining weight, especially, an apparatus for weighing very heavy bodies, as loaded wagons, cars, bales, etc - *w*, *scale*, *n* A scale for finding the weight of any object - *w*, *scoop*, *n* A scoop having a spring-balance in the handle, so that when the spring is released the weight of the contents of the scoop is indicated on its graduated handle

*weight*, 1 *wē*, 2 *wē*, *ri* 1. To add weight to, put a load upon, figuratively, to burden, as, the horse is sufficiently *weighted*, he *weights* himself with care 2. To adulterate or load (fabrics or other merchandise) with cheap foreign substances, as, if the importer *weights* his teas, the dyer also *weights* his fabrics 3. In founding, to place weights upon (the upper box of a flask), to prevent the parts from separating by pressure of molten metal 4. In scientific observations, to assign to (an observation) a number that is supposed to express its relative value 5. [*Prov Eng* or *Scot*] To estimate the weight of (anything) by lifting, *heft*

*weight*, *n* 1. The measure of the force with which bodies tend toward the earth's center or the quality thus measured, downward pressure due to gravity diminished by the centrifugal force due to the earth's rotation, ponderosity

Weight varies directly as the mass of a body and as the force of gravity. As the mass of a given body is invariable, that body always weighs the same at the same place under uniform conditions, but as the force of gravity is different for different places (see *STANDARD GRAVITY*, under *GRAVITY*), change of position involves change of weight but the change is too small to be taken into account in commercial transactions. The weight of any body is increased about 1/10 by removal from the equator to the poles. The apparent weight depends also upon the surrounding medium, the supporting influence of this being greater the greater its density, so that a body weighs less in water than in air. In stating weights, scientific accuracy requires a statement of the exact latitude, altitude, barometric pressure, temperature, and other conditions. Compare note under *MASS* 5 2. A definite mass of brass, iron, or other metal used in weighing-machines of various sorts as a standard, as a pound, ounce, etc. 3. Any quantity of heaviness, whether expressed indefinitely or in terms of standard units, also, mass, relative quantity of matter.

Weight is used in compounds by sporting men. See *hantam-weight*; *catch-w*; *featherweight*; *heavyweight*; *light-w*; *middleweight*; *welter-w*

4. Any mass used as a counterpoise or to exert pressure or force by gravity, as, a paper-weight, clock-weight 5. A scale or graduated system of standard units of weight, as, *avoirdupois weight*, *troy weight*

Three systems are in common use - *avoirdupois*, *apothecaries*, and *troy weights* - having the *grain* common to them. The ounce and pound are alike in *apothecaries* and *troy weights*, and in *avoirdupois* the ounce is less but the pound is a little more than one-fifth greater, or as 7,000 to 5,760. The lower denominations are in *avoirdupois*, the *drum*, in *apothecaries*, the *scruple* and *drum*, in *troy*, the *carat* and *penicypent*. For specific values of weights in each class, see *table* and the characteristic word. See also *METRIC SYSTEM*

6. The relative tendency of any mass toward a center of superior force, as, the *weight* of a planet or satellite 7. Figuratively, the quality of possessing due efficacy, impressiveness, importance, especially, superior efficacy or preponderance, as, of proof in establishing a conclusion, as, a man of *weight*, the *weight* of evidence is against him 8. A feeling of oppressiveness, mental or otherwise, as, the *weight* of care, a feeling of *weight* in one's head 9. *Mining* (1) The sinking of the roof due to removal of its natural support (2) [*Austral*] A pennyweight generally in plural

10. *Math* A hypothetical degree assigned to an algebraical expression, often by estimating according to some definite rule the degrees of the terms of which it is composed. See *phrases* 11. *Archery* The pull necessary for the full distention of the bow, measured in pounds

12. [*Archaic*] The resistance to be overcome by a machine in working, or its load, with simple mechanical powers, the mass to be moved or suspended [*< AS* *gewicht*, *< wegan*, lift] *weight*; *weight*

*Syn*: burden, *emac*, *gravity*, *heaviness* *import*, *load*,

moment, *ponderosity*, *ponderousness*, *power*, *pressure* See *INFLUENCE*, *LOAD* - *ad-he'sian* weight, *n* A weight which causes friction, specif, the weight supported by the driving-wheels of a locomotive - *car-load*, minimum *w*, (*Roll-road*), the smallest weight that can be pulled by the car-load - *gram-molecular w*, same as *GRAM-MOLECULE* - *gross w*, the full weight of goods, no allowance being made for tare, tret, or waste opposed to *net weight* See *NET*, *a*, 2 - *lazy w*, scant weight - *molecular w*, the weight of a molecule, referred to hydrogen as a standard - *weight's car*'ri-er, *n* One who or that which bears or carries weight, specif, a race-horse or hunter having both speed and exceptional capability of carrying weight - *w*, *cloths*, *n* *pl* *Horse-racing* Saddle-cloths that are weighed - *w*, *for age* (*Horse-racing*), the weight of a horse as determined by its age and unaffected by allowances - *w*, *tail*, *n* In ship-building, a nail heavier than a deck-nail and with a flat head - *w*, of a constant (*Math*), the exponent of the modulus of transformation in its equation - *w*, of an observation, in scientific observations, a number expressing the relative value or importance of an observation, and inversely proportional to the square of its probable error - *w*, of a reciprocal (*Math*), the sum of the orders, each diminished by two, of the factors of the term having the greatest weight - *w*, of a resultant (*Math*), the continued product of the degrees of the equations from which it is derived - *w*, of metal, the weight of projectiles that can be thrown in a single discharge of all the guns of a vessel - *w*, of wind, the pressure of air supposed to an organ-stop, or group of stops, by the bellows - *w*, *rest*, *n* A lute-rest held on the ways by a weight suspended beneath

The following table and notes exhibit current weights in use throughout the world, and historic weights useful for reference, together with some disused modern weights and some of medieval times. The superior figures used in the table indicate that further information is given in the notes appended. Comparatively unfamiliar variant names will be found only in the notes at the number corresponding with that appended to the tabulated name. In the column of national equivalents, exact fractions have often been replaced by simpler ones that are nearly equivalent, but the figures in the fifth and sixth columns and in the notes are exact, according to the best available authorities, except that metrical equivalents have usually been given to only two places of decimals. Authorities differ as to exact values in metrical equivalents beyond the decimal point. Some variations will therefore be found, but not often exceeding three-hundredths

**Welsh, n.** 1. The natives of Wales, especially, the Celtic race peculiar to the country, akin to the Highland Scotch, the Irish, and the Manx, and generally regarded as a remnant of the original Britons of England

*Wälsch* in German means originally foreigner, barbarian, and was especially applied by the natives to the Italian, French, and to the present day called *Wälschland* in German. The Saxon invaders gave the same name to the Celtic inhabitants of the British Isles who are called *Wæls* in Anglo-Saxon (pl. *Wælsas*)

Max Müller *Science of Language* second series p 385 [s 1875] During the 7th century the Britons of Wales and Strathclyde often fought side by side against the Angles, and it is from this period that the name by which the Welsh call themselves is supposed to date. *Cymro* & *Comro*, pl. *Cymry* & *Comrogyr*, a "fellow-countryman" as opposed to *W. allfro*, Gaul, Allobroges, "foreigners."

E C Quinlan in *Encyc Brit* 11th ed vol v, p 618  
2. The language of Wales. *Cymric* as spoken by the Welsh. See *CYMRIC*. Welsh is the most vigorous of the surviving Celtic tongues. About 20 weeklies and 15 monthly magazines are published in the language, and it is now taught in elementary schools in Wales. It has an ancient literature, but its modern place as a literary tongue is largely owing to a revival caused by the religious movement of the 18th century. Compare *ESTONIAN*

The *Cymric* includes the *Welsh* with "clothes" from the ninth century or earlier, and a literature from the 12th century.

WINE VITICULTURAL Wines of World (1870, p 9 [W. L. & C. 1875])

Wines are dry when they contain little or no sugar, and sweet when the proportion of saccharine matter is clearly perceptible to the taste Between these two extremes a very great number of wines exist, differing from one another by small proportions of various ingredients Wines consist essentially of water, alcohol, and flavoring matters the proportion of alcohol varying from 73 per cent in certain Chahis wines to 25 in certain sheries The average percentage of alcohol in the principal wines are as follows: Bordeaux or Claret, 10.9 to 13.8, Burgundy, 10.1 to 13.2, Champagne, 12.6 to 14.4, Madeira, 19.0 to 19.7, Moselle, 8.7 to 9.4, Port, 18.0 to 22.0, Rhine wine, 9.5 to 13.0, Sherry, 17.0 to 21.0 The remaining constituents of wine are volatile oil, enanthic ether, grape-sugar, glycerin, gum, vegetable albumen, extractive and coloring matters, tannic, malic, succinic, phosphoric, carbonic, and acetic acids, potassium bitartrate, and calcium tartrate According to the wine, certain of the above ingredients may be present or absent Some of the volatile oils contained in wine have never been isolated they are supposed to be the cause of the flavor and odor, called the bouquet and differ with each variety The quality of the bouquet depends upon the variety of grape, locality of growth, climatic influences, and modes of manufacture Certain wines that have remained for a long time in bottles deposit tartrates called crusts, owing to the conversion of saccharine matters into alcohol in the manufacture of wines the juice expressed from grapes is called must, and is colorless, that from white grapes yields white wine, that from dark-colored grapes when fermented with the maro red wine The must contains from 15 to 33 per cent of sugar and at the usual normal temperature of the air, about 60° Fahr., fermentation soon sets in and continues for some time When nearly all of the sugar has been converted into alcohol and carbon dioxide, the wine is considered formed It is then racked off into casks See table below, and WINE-MAKING

In the following table the column of "class or type" is intended merely to give an elementary idea of the character of the various illustrations selected. The terminology is unsatisfactory, and is not that used by wine-merchants. Where "U S" appears after Burgundy, Haut Sauterne, Johannisberger, Port, Sauterne, Barben, Chahis, Chantierne, Chateau Margaux, etc., it is intended to mean that more or less crude imitations of the wines of those localities were formerly manufactured in the United States and sold under those names The wines described under the names of varieties of grape, such as Burger, Cabernet, Carignan, Frontignan, Heremont, Jurancon, Mendeuse, Muscatel, etc., are wines made of those grapes This is usual all over the world, until a district or vineyard has, by the superiority of its production, gained a name for itself when its wines are then known by that name, as Chateau Margaux, Johannisberger, Sauterne, etc. As most wines may be made in widely differing colors, only that color which may be regarded as typical has been here recorded The following list of wines embraces only those commonly known in commerce The classic and historic Alsatian, Chahis, Chantierne, Rhine, and Sauterne wines, of which little is known, are omitted as obsolete The superior figures in table refer to synonyms at end

wire'less, 1 wire'les, 2 wire'les, v [Rare] 1 t To communicate by wireless telegraphy, as a message II t To send a communication by wireless telegraph, - wire'less-ly, adv

wire'less, a 1 Having or using no wire or wires, spec indicating or characterizing a system of telegraph telephony, or signaling, in which a message is transmitted through space by electric waves 2 Designating the messages so transmitted, as, a wireless telegram

wire'less, n [Colloq] 1 The wireless telegraph or telephone system, as, via wire'less 2 A message sent by wireless telegraph or telephony, as, I sent him a wire'less Compare WIREGRAM, MARCONIOM

wire'less te-le-graph-phy, An electric telegraph system by which signals may be conveyed from one station to another without this use of connecting wires

The earliest practical system demonstrated the applicability of Hertzian waves to the transmission of messages without wires. In the transmitting device of this system, the current of a battery or dynamo connected with the primary winding of an induction-coil is controlled by a telegraph-key. When the circuit is closed the current, interrupted by a vibrator or interrupter, induces a current of high frequency in the secondary winding, and a spark is formed between the two terminals of the secondary one of which is grounded and the other connected to the antenna from which the oscillations set up are radiated through space. At the receiving station, a similar antenna receives the oscillations, which act upon a coherer, causing its resistance to vary in such a way that a reed, energized by a local battery in result with the coherer, emits audible sounds corresponding to the contacts made by the operator. The foregoing embodies the method patented by Guglielmo Marconi, in March, 1897, and is typical of the art. Other systems that have been put into practice include the Lodge-Mulbreed, the Slaby-Arco, the Braun-Siemens-Halske, the Brailly-Popp the Rochefort the Ducretet-Popoff, and the Guerlet systems. In the United States patents have been taken out by R. A. Fessenden, Lee de Forest, J. S. Stone, H. Shoemaker, and others, and their instruments are in operation in various parts of the world, as from Costa Rica to Boas del Toro, and between St. Michael and Safety, Alaska, and on war-ships, etc. See ANTENNA COHERER, CAPACITY-GAGE, HERTZIAN WAVES, TUNE, etc.

wire'less te-leph-o-ny, A telephonic system in which the action of a telephone transmitter causes fluctuations in electric waves radiated through space by a high-frequency current, these fluctuations in turn affecting the receiver at the distant station in such a manner as to reproduce the original sounds. It differs from wireless telegraphy in that it uses a continuous train of waves instead of interrupted groups of waves, but employs similarly placed antennae as sending and receiving agents

wire'man, 1 wire'mao, 2 wire'mao, n [wire'mfn, pl] A man who has to do with wire, especially, one who handles wire for telegraph-lines etc., a wire

wire'pull'er, 1 wire'pul'er, 2 wire'pul'er, n One who pulls the wires, as of a puppet or marionette, hence, one who uses secret means to control others or to accomplish his own schemes, an intriguer wire'work'er, 1 wire'wurk, v - wire'pull'ing, n

readily and accurately, intellect, in the plural, all the mental faculties, as, he needs all his *wits* also, some particular power, as, imagination is *wit* in the poet, skill is *wit* in the swardman or inventor

I know of no more striking proof of the *wit* of man than the gradual unraveling of the strange hieroglyphic signs in which the learning of the ancient Egyptians was enshrined

J N LOCKYER in *Nineteenth Century* July, 1892, p 29

3. The ready perception and happy expression of unexpected or amusing analogies or other relations between ideas apparently incongruous or unrelated, sudden and ingenious association of ideas or words causing delight and surprise, a neat turn of speech. Compare *humor*. *Humor* draws its materials from situations and characteristics of *wit* senses on unexpected and complex relations. *Humor* is chiefly representative and descriptive. *Wit* is brief and sudden, and sharply defined as in crystal. It does not make pictures, it is not fantastic.

GEORGE ELIOT *Essays German Wit* p 100 [r a w 1883]

4. Hence one who has *wit* in any of the above senses, one who is sagacious, sensible, or ingenious, especially, one who has a keen perception of the incongruous or ludicrous and makes skilful use of it in writing or speaking, as, he is a great *wit*. 5 [Archaic] A man of genius or of great learning. 6 Significance, meaning; import. [W] 7. A thought, scheme. 8. Information, knowledge. [C] AS *wit*, < *witan*, know, < *witan*, see.]

Syn. banter, burlesque, drollery, facetiousness, fun, humor, jest, jocularity, joke, playfulness, pleasantry, rallery, wagery, waggishness, witticism. *Wit* is the quick perception of unusual or commonly unperceived analogies or relations between things apparently unrelated, and has been said to depend upon a union of surprise and pleasure. It depends certainly on the production of a diverging, entertaining, or amusing surprise. The analogies with which *wit* plays are often superficial or artificial. *Humor* deals with real analogies of an amusing or entertaining kind, or with traits of character that are seen to have a comical side as soon as brought to view. *Wit* is keen sudden brief, and sometimes severe. *Humor* is deep, thoughtful, sustained, and always kindly. *Pleasantry* is lighter and less vivid than *wit*. *Fun* denotes the merry results produced by *wit* and *humor*, or by any facetious occasion of mirth, and is pronounced and often hilarious. Ant. dullness, gravity, seriousness, sobriety, solemnity, stolidity, stupidity. — *And wit*, native wit, common sense, the five wits, the five senses, also, the mental faculties — to be at one's *wits* end, see END — to have one's *wits* in a creel, or to be in a creel [Scot.], to labor under a temporary confusion of mind — to live by one's *wits*, to have no settled means of subsistence pick up a living — *wit*'crack'ert, n. One who makes jests a joker — *wit*'tooth, n. A wisdom-tooth — *wit*'worm, n. One who feeds on wit.

*Wit'an*, 1 *wit'*ea, 2 *wit'an*, n. pl. Eng Hist. The members of a witenagemot. [C] AS *wit'an*, pl of *wita*, wise man, < *witan*, know, < *witan*, see.]

*Witch*, 1 *wich*, 2 *wich*, r. 1. To overcome or effect by *witchcraft*, bewitch. 2. To fascinate or enchain in any way as by witchery or magic. [C] AS *wiccan*, < *wicca*, sorcerer, see *WITCH*, n.]

*Witch*, n. 1. One who is supposed to have influence over, or dealings with evil spirits or the devil in order to work a spell upon human beings or their belongings, a conjurer, one who practises the black art formerly applied to both men and women, but now generally restricted to women, as opposed to wizard. Witches are often described as folk-lore riding through the air on broomsticks, as congregating in sabbaths called witches' Sabbaths. See *SABBATH*, *WITCHCRAFT*.

The popular theory divides *witches* into three classes of which the first powerful to hurt but not to help is appropriately called Black. The second of directly opposite quality helpful but not hurtful is called White, and the third, patient as well to help as to hurt is styled Grey. See *BRAND Pop Antiq*, *Sorcery or Witchcraft* p 588 [c w 1877].

2. An ugly, malignant old woman, a hag. 3. A bewitching or fascinating woman girl, also, a mischievous or ragsy little girl. 4. *Textile*. The shedding-motion of a harness-loom. 5. The storm-petrel. 6 [Rare] A spell or charm. 7. [Prov Eng] A paper cone filled with hard and used as a candle. 8 [Brit Guiana] An anti. 9. Same as *VERSERA*. — *witch'*ball, n. A ball-like mass of interwoven stems of herbaceous plants, driven by the wind — *w'chick*, n. [Prov Eng] A swallow from various superstitions that these birds have power to bewitch — *w'doctor*, n. One who professes to heal the sick by sorcery, a medicine-man — *witch'es'*broom, n. *Bot*. A compact broom-like growth of parsons or various trees and shrubs caused by shortening of internodes and excessive multiplication of branches, and due in some cases to the presence of parasitic fungi. See *CROW'S-NEST* *witch'es'*, be'somit. — *witch'es'*but'ter, n. 1. A dark-brown or black jelly-like fungus (*Edictia auricula judae*) studded over with small glandular papillae. 2. One of the jelly-like fresh-water algae. See *NOSROC* — *witch'es'*tblm'ble, n. 1. The sea-campbell. 2. The bluebatte. 3. The purple foxglove. 4. The harebell — *w'finder*, n. One who was employed to detect witches and to testify against them when they were prosecuted — *w'gowan*, n. 1. The dandelion. 2. The gladiolus (*Tritolus europaeus*) — *w'grass*, n. The doing of work always involves an expenditure or disappearance of energy, actual or potential of which the work done is the measure. Work is necessarily done whenever a force acts upon a moving point in the direction of its motion, and may then be measured by the product of the force into the distance through which the point moves while it acts. Thus, the work done by lifting a weight of ten pounds five feet is 50 foot-pounds. Compare *ENERGY*.

When a force produces acceleration or when it maintains motion unchanged in opposition to resistance it is said to do *work*.

*Yan'kee Doodle*, 1. A song, including many humorous verses, popular in pre-Revolutionary times, and generally regarded as one of the national airs of the United States. The origin of the words is entirely obscure. The statement is made in DUFFY's *Cyclopedia of American Literature*, and also by Mary Mapes Dodge (*Honors Brinker*, p. 33 s 1891), that it was taken from an old Dutch harvest-song, the refrain of which, as quoted from the latter book, was

Edward Everett Hale attributes the present version to Edward Bangs, who graduated from Harvard in 1777. The most popular theory, however, assigns the authorship to Dr Richard Shuckburgh, an English surgeon and wit, who wrote the verses in 1775 to deride the fantastically uniformed Colonial troops. The tune has been ascribed to various countries and to the medieval church but probably had its origin in England. It occurs in *Two to One*, an opera of Samuel Arnold a London 1784

1. To encircle as if with a zone or belt encircle II. To take the form of zones

zone, n 1. Geog A region of the earth enclosed between two parallels of latitude, specif, one of the five divisions of the earth's surface, taking their names from the prevailing climate, and distinguished as follows the torrid zone, extending on each side of the equator 23° 27' (the inclination of the ecliptic), so that the sun is in the zenith at noon in one part of it or another throughout the whole year the temperate zones, included between the parallels 23° 27' and 66° 33' on both sides of the equator, so that the sun is always south of the zenith at noon in the north temperate zone and north of it in the south temperate, but rises and sets daily in each throughout the year and the frigid zones, within the parallels 66° 33' and the poles, so that there is at least one day in the year in each when the sun does not rise and one when it does not set

2. (1) A belt or area delimited from others, as by the character of its organisms, also, a belt of land distinguished by any characteristic, as, the wheat-zone

Some naturalists have divided the sea into five zones (between tide-marks) (a) the antarctic zone (down water to fifteen fathoms), (c) the coralline zone (fifty to fifty fathoms), (d) the deep-sea coral zone (fifty to a hundred fathoms), (e) the abyssal zone (beyond a hundred fathoms). These distinctions are not fully established (2) Geol. A bed or several consecutive beds or strata containing one or more characteristic fossils and thereby distinguished from other portions of the geologic column

Where one or a limited number of beds is characterized by one or more distinctive fossils it is termed a Zone and is often known by the name of a typical fossil. A. Geikie Test-Book of Geology 4th ed vol II p 860 [MACM '03]

(3) U S Postol Service A unit of area one-half of a degree square See PARCEL POST under PARCEL (4) Mil A region proscribed for neutrals by a belligerent as being within range of military or naval operations war-zone

3. Math The portion of a surface of revolution, included between two parallel planes that are perpendicular to the axis 4. Astron A belt on the surface of the celestial sphere parallel to the equator 5. Crystal A belt or series of faces on a crystal, whose mutual intersections are parallel to each other and the zone-axis 6. Anat A belt-like area distinguished from its surroundings either by structure or appearance,

as, the zone of Zinn, about the hyaloid membrane of the eye 7. Any belt, band, stripe, or line, as of color or of other distinguishing thing or character, encircling an object or concentrically disposed on a surface 8. Orally (now chiefly in poetry), a belt or girdle

9. Railroad (1) The total number of stations situated in a certain area measured from a place whence traffic is shipped (2) A circular area within which a uniform fare is charged by the surface-car companies

10. [Rare] Distance around a globular or circular body. [*< Gr zona*, < *L. zona*, < *Gr zōnē*, sec ZONA]—annual zone, an annual ring. See RING, n. 1. arethralphino z., a horizontal line on which temperature is the determining climatic cause of the general vegetation type and the animal life nipline z., connecting z. (Bot), same as climate, n. 7. (1) polar z., the region surrounding the thermoelectric electrode when applied to the human body, a term proposed by De Winter—primordial z., the lowest geological formation known, during the currency of the epithet, to contain a fossil fauna equivalent to the Cambrian. See OROLOG—rainless z., the region of the ocean just above the tropics that has the least precipitation and maximum saltness—shear zone, n. Geol A zone of rock diamically metamorphosed along a fault or shear plane—three-mile z., the belt within the three-mile limit. See LIMIT—zone'ax'is, n. Crystal The imaginary line through a crystal, to which all the faces in a given zone, and the mutual intersections of these faces, are parallel—z. of action, influence, etc. see SPHERE 3 (2)—z. of clouds, a rather permanent belt of clouds situated above the thermal equator of the earth—z. of defense, the space around a fortification within reach of its guns—z. of fracture, the outer zone of the earth's crust, in which fracture may result from deformation—z. of stars, the stars contained within a zone of the celestial sphere. See ZONE, 4—z. of vegetation, a belt of vegetation of a given type lying be-

Optics A plate composed of rings alternately transparent and opaque, which produces the effect of a lens by the diffraction of light through it. An analogous device has been suggested for use in connection with sound-waves—z. reticulate, n. Astron A glass or mica reticula having graduations on the surface to correspond to equal intervals of right ascension and other linear graduation at right angles to the first to correspond to equal intervals of declination z. reticulate—z. starlike, n. A system in use, particularly on the Austro-Hungarian railways, by which railroad-tickets are made to read to any destination not exceeding a certain distance limit or zone. Until the maximum limit is reached, the passenger may go in any direction. 2. system

# DISPUTED PRONUNCIATIONS.

THE SELECTION of the terms included in this list was made with the main purpose of including those words in common speech in the correct pronunciation of which some differences exist. Words that are seldom spoken, or met with only in books, have no established pronunciation, being spoken or read occasionally as analogy or principle indicates. They are mostly omitted here. The late Prof W W SKEAT, writing to the Editor on this subject, said "Many of these words are *mere* dictionary words and the only real words are those that are actually in living use. I have never once, in the course of more than 70 years, *heard* the words *aam*, *abaetinal*, *abeigh* [I have *read* it!], *abele*, *acaulose*, *absolutory*. I have never before either seen or heard of *abrus*, and I hold firmly to the belief of Dr. A J. ELLIS, viz, that 'no one can tell how to pronounce an English word unless he has at some time or other *heard* it' It would be extremely dishonest in me to pretend to have any opinion at all as to such words as these."

THE NEW STANDARD DICTIONARY assumes that correctness in pronouncing — like correctness in diction in general — depends upon the **consensus of usage**. The correctness of English pronunciations should obviously be determined by the best and widest usage among the English-speaking peoples. To a mode of pronouncing a word that is general among the educated classes of all these peoples, no exception properly can be taken, and any form of orthoepy that prevails among some of these peoples should command the recognition of lexicographers. Even forms that are used by a few only of the greater speakers may sometimes call for consideration at least, and possibly for record. One recognized aim of a dictionary is to ascertain and record the facts of English usage in pronouncing, while at the same time indicating what it regards as the best usage.

In this work a systematic attempt has been made to ascertain the **consensus of usage** throughout the English-speaking world, by selecting from scholars and professors of all the great centers of English civilization an Advisory Committee on Disputed Pronunciations, of twenty-five persons, to serve as witnesses to give testimony regarding the usage in those centers, and as a jury to decide upon rival claims in disputed cases.

Disputed pronunciations have been referred to this Advisory Committee, composed of prominent educators in the United States, the British Isles, Canada, South Africa, Australia, and India. By a simple system, the forms preferred by each member of the Committee and those preferred by the leading dictionaries are given in the following pages. This system, it is thought, furnishes a most comprehensive, intelligent, and authoritative presentation of correct pronunciation — in fact, a consensus of the best judgment of the English-speaking world. It covers the general or common words regarding whose pronunciation the modern dictionaries differ.

The first respelled pronunciation in each case indicates the preference of this Dictionary, and represents the decision reached by the editor in charge of this department, after examining the pronunciations recorded by other dictionaries and books of reference, and comparing and weighing the evidence thus collected. The pronunciations that follow the forms preferred by this Dictionary are taken from other dictionaries or given upon the authority of members of the Advisory Committee. The dictionaries whose preferences are given are indicated by abbreviations, as follows:

*C* Century  
*E* Encyclopædic (Hunter's).

*I* New Imperial  
*M* Murray (New English).

*S* Stormonth  
*W* Webster (International)

*Wr* Worcester

The small numerals following the italic letters, as *C*<sup>1</sup>, *C*<sup>2</sup>, *M*<sup>1</sup>, *M*<sup>2</sup>, indicate the order of choice of the authorities cited. In giving the preferences of the Advisory Committee, in order to save space and at the same time to secure completeness in embodying the consensus of usage, Arabic numerals are used to represent the names of the members of the Committee; as, *abatis*, *ab'ə-tis*, 1, 3, etc, instead of *abatis*, *ab'ə-tis*, W. J. Alexander, P. P. Claxton, etc. (See the following page.)

**Technical Names.**—The pronunciations of geographical and chemical names and terms, and of technical terms generally, were not referred to the Advisory Committee.

The pronunciations of technical terms, as in zoology, botany, chemistry, and the trades, have been decided upon after consultation with distinguished representatives of the various departments of science and art and the trades (For further particulars, see Introductory.)

# RULES FOR THE SIMPLIFICATION OF SPELLING.

THE following rules, approved by the SIMPLIFIED SPELLING BOARD and recommended for immediate use, are reprinted from Circular No 23, issued by the Board.

"Rule" here means simply a recommendation that applies to a number of words having the same irregularity of spelling. In some cases the rule is restricted to a limited number of words in the class. Any one who chooses to extend the rule at once to all the words of a given class is of course free to do so.

After each rule is given a list, either of all the words affected (if they are not many), or of all the words mentioned in the original rule, or of a few examples of the large number covered by the rule. In the latter case "Ex." ("Examples") is prefixed, and "etc." is added. If the official recommendation applies to all words containing the letter, sequence of letters, or suffix affected, in the pronunciation indicated, the word RULE is printed in capitals. ## The Simplified Spelling Board.

The Simplified Spelling Board was organized January 12, 1906, to promote, by systematic and continued effort, the gradual simplification and regulation of English spelling.

The original members of the Board were eleven, nineteen more were elected at the time of organization, and the others at intervals since. Twelve have died. There are forty-one members, including ten who represent other English-speaking countries — England, Scotland, Wales, Nova Scotia, Ontario, Australia, and New Zealand.

All the British and some of the American members of the Simplified Spelling Board are members also of the Simplified Spelling Society of Great Britain, organized in September, 1908.

Foreign words and phrases of frequent occurrence in English literature and law will be found explained in their proper alphabetic order in the body of this dictionary. Such will not be repeated here.

Those who consult the present pages will perhaps need occasionally to remember that a phrase required may be entered here in an alphabetic place not answering to that which the form of the phrase as encountered by them in reading would regularly demand. Foreign expressions, as found quoted by different authors, not infrequently vary in the order of their words. (Care has been taken to conform to the best text accessible in each case, tho it has not always been possible to trace quotations to their original sources.)

Many foreign phrases, in actual English quotation, have been wrested more or less from their proper original meaning, and phrases, such as mottoes of institutions and of persons, have from time to time been constructed with little reference to pure classic usage.
